NAAC - SSR IV CYCLE

M.Sc. CHEMISTRY

REGULATION 17

2019-20

PROGRAMME STRUCTURE &

SYLLABUS

	Practical – I – Inorganic Chemistry (CH1L1)	
S.No	COURSE OUTCOMES	
	After completion of the course, the student will be able to :	
1	To understand the importance of Inorganic qualitative analysis and its use in	
	research and industry.	
2	To apply the procedures / tests for the identification of cations and anions.	
3	To interpret the need for separation of interfering radical in Inorganic qualitative	
	analysis.	
4	To know that complexes can be synthesized by simple procedures.	

. . • · (CITAT 4) D

INORGANIC CHEMISTRY (PRACTICAL-I)

Qualitative Analysis:

Qualitative analysis of an inorganic mixture containing three cations (one less familiar cation) and three anions (one interfering anion)

Less familiar cations: Tl, Mo, Th, Zr, V and U.

Interfering anions: Oxalate, tartrate, phosphate and chromate.

Preparations of Inorganic complexes :1. Hexaamine Cobalt(III) chloride

2. Tris – Thiourea copper(I)Sulphate 3. Cis - Potassium di aqua bis oxalato Chromate(III)

4. Potassium tris oxalato Ferrate(III)

Note: Only Mixture Analysis is given for Practical Exam

P.B. Siddhartha College of Arts & Science : : Vijayawada - 520 010

CIA Practicals

Total Marks - 30 M

1.	Lab Performance / per experiment	t – 20 Marks
	Experiment	- 10 Marks
	Observation	 – 5 Marks
	Result / Yield / Report	– 5 Marks

2.	Semester End Internal Exam	– 10 Marks
	Experiment	– 7 Marks
	Result / Yield / Report	– 3 Marks

Practical – II – Organic Chemistry (CH1L2)

COURSE OUTCOMES	
After completion of the course, the student will be able to :	
To understand the importance of organic compound synthesis and its use in	
research and industry.	
To comprehend the procedures for the different steps revolved in the organic	
compound synthesis.	
To understand the mechanisms for the synthesis of organic compounds in	
different steps.	
To applying the procedure of recrystallisation of organic compound.	
	After completion of the course, the student will be able to : To understand the importance of organic compound synthesis and its use in research and industry. To comprehend the procedures for the different steps revolved in the organic compound synthesis. To understand the mechanisms for the synthesis of organic compounds in different steps.

Preparation and purification (Recrystallisation) of organic compounds involving 1 & 2 steps. Single step

- 1. Asprin
- 2. Iodoform
- 3. m-dinitrobenzene
- 4. p-bromo Acetanilide
- 5. Acetanilide

Two step

- 1. P-nitro acetanilide from aniline
- 2. P-nitro aniline from acetanilide
- 3. Benzanilide from Benzophenone.

M.Sc. DEGREE EXAMINATION

Internal Practical Model Paper

(Regulation 2017-2018)	
Time: 6 hours	Maximum Marks: 30
1. Experiment	– 20 Marks
2. Result / Graphs / Yield / Report	– 10 Marks

Practical – III – Physical Chemistry (CH1L3)

S.No	COURSE OUTCOMES	
	After completion of the course, the student have an ability to	
1	Develop skills in problem solving, critical thinking and analytical reasoning in finding the CST of Phenol water system and partition coefficient of benzoic acid between benzene and water.	
2	Determine the rate constants of first and second order reactions.	
3	Communicate the results of analysis with ethics and responsibility.	

1. Determination of rate constant of the oxidation of iodide ion with persulphate ion.

- 2. Relative strengths of acids by studying the hydrolysis of ethyl acetate / methyl acetate.
- 3. Determination of equilibrium constant of KI3 ⇔ KI + I2 by partition coefficient method and determination of unknown concentration of potassium iodide.
- 4. Distribution coefficient of Benzoic acid between Benzene and water.
- 5. Determination of critical solution temperature of phenol-water system Study of the effect of electrolyte on the miscibility of phenol-water system

M.Sc. DEGREE EXAMINATION

Extern	al Practical Model Paper	
	(Regulation 2017-2018)	
Time	e: 6 hours	Maximum Marks: 70
1. '	To write the principle and procedure / mechanism related to practical as listed in the practical syllabus – 5	5 M
3.	Record Experiment (Procedure / Tabulation / calculation etc.,) – 50 Result / Graphs / Yield / Report	- 10 M M - 5 M

<u>Semester – I - SYLLABUS</u> <u>W.E.F 2019 – 2020 Batch and Onwards</u> <u>COURSE OUTCOMES</u>

Paper – I – General Chemistry (CH1T1)

S.No	COURSE OUTCOMES	
	After completion of the course, the student will be able to :	
1	Demonstrate sound knowledge in fundamentals and application of titrimetry analysis, computers Fortran programming and basic statistical procedures.	
2	Experiment various titrations on their own by analytical techniques and finding the results by graphical methods and can also apply statistical principles on experimental data.	
3	Develop skills in problem solving, critical thinking and analytical reasoning of chemistry related problems.	
4	Implement the Fortran 77 programs for various chemistry related problems and draw the conclusions.	
5	Analyze the data obtained in quantitative analysis whether consistant or not as per the statistical rules.	

UNIT I

Treatment of analytical data : Classification of errors - Determinate and indeterminate errors - Minimisation of errors - Accuracy and precision - Distribution of random errors - Gaussian distribution - Measures of central tendency - Measures of precision - Standard deviation - Standard error of mean - student's t test - Confidence interval of mean - Testing for significance - Comparison of two means – F - test - Criteria of rejection of an observation - propagation of errors - Significant figures and computation rules - Control charts - Regression analysis - Linear least squares analysis.

UNIT-II

Titrimetric Analysis:Classification of reactions in titrimetric analysis- Primary and secondary standards-Neutralisation titrations-Theory of neutralisation indicators-Mixed indicators-Neutralisation curves-Displacement titrations-Precipitation titrations-Indicators for precipitation titrations-Volhard method-Mohr method- Theory of adsorption indicators-Oxidation reduction titrations-Change of electrode potentials during titration of Fe(II) with Ce(IV)- Detection of end point in redox titrations-Complexometric titrations- Metal ion indicators-Applications of EDTA titrations-Titration of cyanide with silver ion.

UNIT -III

Visible spectro photometry – Theory of spectrophotometry and colorimetry, Beer-Lambert's law - Deviations from Beers law. Classification of methods of colour measurement or comparison (standard series method, Duplication method, Dilution method, photoelectric-photometer method, spectrophotometer method)-Instrumentation – Applications-determination of phosphates, chlorides, Iron, Manganese, chromium - Photometric titrations-Spectrophotometric determination of pK value of an indicator

UNIT – IV

Potentiometry: Advantages of potentiometric methods - Reference electrode - Standard hydrogen electrode .Acid- alkali or Neutralisation titration, Oxidation – reduction titrations, Precipitation titrations, complexometric titrations, Methods of end point location (Graphical, Differentiation method, Pinkhof- Treadwell method). Calomel electrode -Indicator electrodes:

Metal-metal ion electrodes - Inert electrodes - Membrane electrodes - theory of glass membrane potential - Direct potentiometry , potentiometric titrations - Applications.

UNIT V

Programming in FORTRAN 77 - Flow charts-Constants and variables - Arithmetic expressions - Arithmetic statement - Replacement statement - Input and output statements - Format specifications -Termination statement - Branching statement - IF statement - Arithmetic and logical IF statement - GOTO statement - Subscripted variable and DIMENSION Statement - DATA Statement. Control statements - DO statement - Rules for DO statements - Functions and subroutines – common statement

Flow charts and computer programs for

- i) Summing of power series $1+x+x^2+x^3+\ldots+x^n$
- ii) Rate constant of First order reaction or Beer's law by linear least square method.
- iii) Hydrogen ion concentration of a strong acid/Quadratic equation.
- iv) Solution for Vander Waals equation or Hydrogen ion concentration of a monoprotic Weak acid.
- v) Standard deviation and variance of univariant data.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2019 FIRST SEMESTER

Paper-I :: General Chemistry - I

Time: 3 hours M	aximum Marks: 70
UNIT - I	
1 (a)Explain the different between Accuracy & Precision with examples.	(6M) – CO - 1
(b) Write notes on distribution of errors.	(8M) – CO-1
(Or)	
(c) Explain how errors are propogated.	(6M) – CO-1
(d) What are the criteria for rejection of an observation?	(4M) – CO- 3
(e) Write notes on significant figures.	(4M) – CO-1
UNIT - II	
2 (a) What are $1^0 \& 2^0$ standards?	(4M) – CO-1
(b) Explain the theory of neutralization indicators.	(6M) – CO-1

(c) Explain the principle of displacement titrations. (Or)	(4M) – CO- 1
(d) Describe the Volhard & Mohr method in precipitation titrations.(e) How is the end point detected in a redox titration?	(8M) – CO- 1 (6M) – CO- 1
UNIT - III	
3 (a) Define Beer – Lambert's law. Give an account on deviations from Beer's law	
(b) Write a note on the following colour measurement or comparison in visible	(6M) – CO-1
spectrophotometry (i) Duplication method (ii) Standard series method (Or)	(8M)
(c) Discuss the spectrophotometric method for the determination of phosphate.	
	(6M) – CO- 3
(d) Explain the method for the determination of P ^k value of an indicator spectrophotometrically.	(8M) – CO- 4
UNIT - IV	
4 (a) Discuss the construction and working of standard hydrogen electrode.	(6M)- CO-1
(b) Give a detailed account on glass membrane electrode.	(8M) CO-1
(Or) (c) Explain the role of potentiometry in oxidation – reduction titrations with nece	ssarv
theory.	(6M)
(d) Write a note on the following end point location methods in potentiometry	
(i) Graphical Method (ii) Pinkhof – Treadwell method	(8M) CO-2
UNIT - V	
5 (a) What are the rules of Do statements.	(4M)- CO-1
(b) Write a FORTAN programme and flow chart for H^+ ion concentration of a	
strong acid.	(10M)– CO- 4
(Or) (c) Write a FORTAN programme and flow chart for 1+x+x ² +x ³ +x ⁿ .	(14M) – CO-
•	

Paper – II – Inorganic Chemistry (CH1T2)

S.No	COURSE OUTCOMES	
	After completion of the course, the student will be able to :	
1	Memorize the basic concepts of quantum chemistry, co-ordination chemistry and chemical bonding.	
2	Comprehend the role of basic and advanced concepts of quantum chemistry, co- ordination chemistry and chemical bonding.	
3	Exercise the conceptual knowledge gained in the concepts of quantum chemistry, co-ordination chemistry and chemical bonding in future research, in chosen job role as well as in understanding other concepts in chemistry.	
4	Compare and distinguish one concept from the other in inorganic chemistry and in correlation with other chemistries as well.	
5	Assess that how far the contents of quantum chemistry, co-ordination chemistry and chemical bonding are useful in rendering theoretical explanations for the concepts in chemistry.	
6	Exploit core areas of quantum chemistry, co-ordination chemistry and chemical bonding to develop research strategies in chemistry.	

UNIT-I

Introduction to Exact Quantum Mechanical Results :Schrodinger equation importance of wave function ,Operators, Eigen values and Eigen functions, derivation of wave equation using operator concept . Discussion of solutions of Schrodinger's equation to some model systems viz. particle in one dimensional box (applications), three dimensional box, Rigid rotator system and the Hydrogen atom.

Approximate Methods - Variation theorem, linear variation principle perturbation theory, (first order and non degenerate). Application of variation method to the Hydrogen atom.

UNIT-II

Metal π - complexes: preparation, structure and bonding in Nitrosyl, Dinitrogen and Dioxygen complexes

Chemistry of non- transition elements - Inter halogen compounds, Halogen oxides and oxyfluorides. Noble gas compounds with special reference to clathrates. Spectral and Magnetic properties of Lanthanides and Actinides. Analytical applications of Lanthanides and Actinides. Synthesis, properties and structure of B-N, S-N, P-N cyclic compounds and intercalation compounds.

UNIT-III

Structure and Bonding - $p\pi$ - $d\pi$ bonding - Evidences (in non-transition metal compounds).Concept of Hybridization, Bent's rule , energetics of Hybridisation, concept of Resonance. Non-valence cohesive forces, Hydrogen bonding. VSEPR theory, Walsh diagrams for linear (BeH₂) and bent (H₂O) molecules . Molecular Orbital theory, Symmetry of Molecular orbitals, Molecular orbitals in triatomic (BeH₂) molecules and ions (NO₂⁻) and energy level diagrams.

UNIT-IV

Metal –ligand bonding - Crystal Field Theory of bonding in transition metal complexes – Splitting of d-orbitals in octahedral, tetrahedral, square plannar, Trigonal bipyramidal and Square pyramidal fields. Tetragonal distortions - Jahn Teller effect . Applications and limitations of CFT. Experimental evidences for covalence in complexes. Molecular Orbital Theory of bonding for Octahedral, tetrahedral and square planar complexes. π - bonding and MOT - Effect of π -donor and π -acceptor ligands on Δ o. Experimental evidence for π - bonding in complexes.

UNIT-V

Metal – ligand Equilibria in solutions - Step wise and over all formation constants. Trends in stepwise constants (statistical effect and statistical ratio). Determination of formation constants by Spectrophotometric method (Job's method) and pH metric method(Bjerrum's). Stability correlations - Irwing – William's series. Hard and soft acids and bases – Acid-base strength and HSAB. Macrocyclic complexes - Crown ethers and Cryptates. Preparation and structures of Isopoly and Heteropoly acids and their salts.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2019 FIRST SEMESTER

Paper-II :: Inorganic Chemistry - I

Time: 3 hours	Maximum Marks: 70
UNIT - I	
1 (a) Write down the wave equations for rigid rotaor an functions.	nd solve it to get eigen (14M) – CO-
2	× ,
(Or)	
(b) Arrive at the expression for first order correction	of eigen values in perturbation
method. 1	(8M) – CO-
(c) Explain the basic concepts of variation method.1	(6M) – CO-
UNIT - II	
2. (a) Discuss the magnetic properties of actinides.	(6M) – CO-
(b) Write an account on phosphorus-nitrogen cyclic c	ompounds. (8M) – CO-
(Or)	
(c) Give an account on dioxygen complexes.	(6M) – CO-
(d) Explain the structure and bonding in nitrosyl comp2	plexes. (8M) – CO-
UNIT - III	
3.(a) Explain the sailent features of VSEPR theory.	(6M) – CO-
(b) Draw and explain the molecular orbital energy leve	-
2	(8M) – CO-
(Or)	
(c) Give an account on energetic of hybridization.	(4M) – CO-
(d) Explain the evidences for $p\pi - d\pi$ bonding in non-	
4	(10M) – CO-
UNIT - IV	
4.(a) Draw and explain the crystal field splitting pattern geometry.	in square pyramidal $(4M) - CO-$
2(b) Explain tetragonal distortion in an octahedral com	plex with a suitable example. (10M) – CO- 3

(Or)

– CO- 4
– CO- 4

UNIT - V
5.(a) Write the step-wise and overall formation constants for the following reactions
(i) Ag ⁺ + 2NH ₃ → $[Ag(NH_3)_2]^+$ (ii) Fe ⁺³ + 4Cl → $[FeCl_4]^-$ (6M) - CO-1
(b) Describe the spectrophotometric method for the determination of a stability
constant. (8M) – CO- 2
(Or)

(c)	Discuss about Irwing – William series.	(6M) – CO-1
(d)	Write an account on macro-cyclic ligands.	(8M) – CO-1

Paper – III – Organic Chemistry ((CH1T3))
-----------------------------------	----------------	---

S.No	COURSE OUTCOMES
5.110	After completion of the course, the student will be able to :
1	Recollect the basic concepts of aromaticity, reactive intermediates, stereo chemistry and hetero cyclic chemistry.
2	Make out the basic and advanced concepts of aromaticity, reactive intermediates stereo chemistry and heterocyclic chemistry.
3	Address high level concepts in organic chemistry with conceptual knowledge gained in aromaticity, reactive intermediates, stereo chemistry and hetero cyclic chemistry.
4	Appraise how knowledge about aromaticity, reactive intermediates, stereo chemistry and hetero cyclic chemistry is useful in understanding the properties of organic compounds.
5	Judge how far that the concepts of aromaticity, reactive intermediates, stereochemistry and heterocyclic chemistry in assessing the properties of products obtained in organic reactions.
6	Design new strategic routes of organic synthesis with knowledge acquired on the concepts of organic chemistry.

UNIT-I

Nature of Bonding in Organic Molecules: Localised and Delocalized, Delocalised chemical bonding conjugation, cross conjugation, hyper conjugation, Tautomerism.

Aromaticity: Concept of Aromaticity, Aromaticity of five membered, six membered rings .- Non benzonoid aromatic compounds:-cyclopropenylcation,

Cyclobutadienyldication, cyclopentadienyl anion-tropyllium cation and cyclooctatetraenyl dianion. Homoaromaticity, Anti aromaticity.

UNIT-II

Reactive intermediates:

Generation, Structure, Stability, Detection and Reactivity of Carbocations, Carbanions, Free radicals, Carbenes, Nitrenes and Arynes.

Reactive Species: Generation and reactivity of Electrophiles, Nucleophiles, Dienophiles, Ylids.

UNIT-III

Heterocyclic Chemistry:- Synthesis and Reactions of furan, thiophene, pyrrole, pyridine, quinoline, isoquinoline and indole; Skraup synthesis, Fisher indole synthesis.

Heterocyclic compounds more than one hetero atom:- Pyrazole, Imidazole, Oxazole Iso-Oxazole, synthesis and properties.

UNIT-IV

Stereochemistry:

Concept of Chirality: Recognition of symmetry elements and chiral structures (one and more than one chiral centers); D-L and R-S nomenclature, Inter-conversion of Fischer, Newman and Sawhorse projections. Threo and Erythro isomers, - stereo specific and

stereoselective synthesis. Asymmetric synthesis. – Methods of resolution, optical activity in the absence of chiral carbon (biphenyls, allenes and spiranes). Chirality due to helical shape. Geometrical isomerism – E, Z- nomenclature – physical and chemical methods of determining the configuration of geometrical isomers.

Stereochemistry of compounds containing nitrogen, sulphur and phosphorous.

UNIT-V

Conformational analysis:

Conformation of acyclic molecules – alkanes and substituted alkanes –compounds having intramolecular hydrogen bonding, conformations around C-C and carbon hetero atom bonds having C–O & C–N. Conformations of monocyclic compounds – cyclohexane- chair, boat and twist boat cyclohexanes, energy profile diagram –Mono and di- substituted cyclohexanes.

Effect of conformation on reactivity in mono and di- substituted cyclohexane derivatives. Elementary treatment of fused and bridged ring systems – Decalines and Bornanes.

M.Sc. DEGREE EXAMINATION, NOVEMBER FIRST SEMESTER

Paper-III :: Organic Chemistry - I

Time: 3 hours	Maximum Marks: 70
UNIT - I 1 (a) Define delocalized chemical bonding. What are different types of	delocalized
chemical bonding.	(6M)– CO- 1
(b) Explain Non-Benzonoid aromatic compounds of the following.	(0) 000 -
(i) Cyclobutadienyldication (ii) Cyclopentadienyl anion	
(iii) Tropyllium cation (iv) Cycloctatetraenyldianion	(8M) – CO- 2
(Or) (c) Explain the following terms (i) Cross Conjugation (ii)Hyper Conju	ugation (AN) CO 1
(d) Briefly explain the aromaticity of six and five membered ring syst	
UNIT - II	
2 (a) Define electrophiles and nucleophiles. Write examples.	(6M)– CO-1
(b) Discuss the generation, stability and reactivity of carbocations.	(8M)-CO- 2
(Or)	
(c) Discuss about dienophiles and Ylides.	(6M) CO-2
(d) Explain synthesis and few reactions of the following(i) Free radicals (ii) Carbenes (iii) Nitrenes (iv) Arynes	(8M) – CO-2
(i) Free fadicals (ii) Carbenes (iii) Infrenes (iv) Arynes	(000) = CO-2
UNIT - III	
3 (a) Give an account on Skraup synthesis.	(6M)- CO-1
(b) Explain the synthesis and reactions of the following (i)Furan (ii) F (Or)	Pyridine. (8M) – CO-2
(c) Discuss the methods used in the synthesis of Isoquinoline and Ind	lole. (6M)– CO-2
(d) Describe the synthesis and reactions of the following	
(i) Imidazole (ii) Iso oxazole	(8M)– CO-2
UNIT - IV	
4. (a) Discuss the various methods of resolution of a racemic mixture.	(6M) – CO-1
(b) Discuss the optical activity of biphenyls and allenes.	(8M)– CO-2
(Or)	.1
(c) Discuss the stereochemistry of compounds containing nitrogen wit	
suitable examples.(d) What is geometrical isomerism? Discuss the determination of cont	(6M)-CO-2
of geometrical isomers with suitable examples.	(8M)–CO-2
UNIT - V	
5.(a) Discuss conformations with intramolecular hydrogen bonding using	-
examples. (b) Discuss the conformations of cyclohexane. Draw the energy profil	(6M) – CO-2
Which form is more stable?	(8M) – CO-3
(Or)	

(Or)

(c) Write a note on the conformations of Decalin and explain their stability.	(6M) – CO-2
(d) Discuss the conformational analysis of disubstituted cyclohexanes. B	(8M) – CO-3

S.No	COURSE OUTCOMES		
	After the completion of the course, Students will be able to		
1	Recall the basic concepts of thermodynamics, surface chemistry, chemical		
	kinetics and		
	Radiochemistry in detail.		
2	Demonstrate the spontaneous and non spontaneous reaction and derive various		
	thermodynamic and Chemical kinetic derivations.		
3	Utilise the physical significance of thermodynamics and chemical kinetics in		
	explaining the chemical properties and reactivity of reactions.		
4	Analyse the important techniques of separation of isotopes with the help of		
	Aston's, Dempster's Bainbridge mass spectrograph methods, analysis of		
	surfaces with the help of ESCA, Auger electron spectroscopy.		
5	Determine the rate constant of complex reactions and decide the order of a		
	reaction.		
6	Construct the reaction of electrochemical cells and can solve various problems		
	present in it.		

UNIT-I

Thermodynamics - I

Classical thermodynamics - Brief review of first and second laws of thermodynamics - Entropy change in reversible and irreversible processes - Entropy of mixing of ideal gases - Entropy and disorder – Free energy functions - Gibbs-Helmholtz equation - Maxwell partial relations - Conditions of equilibrium and spontaneity - Free energy changes in chemical reactions: Van't Hoff reaction isotherm - Van't Hoff equation - Clausius Clapeyron equation - partial molar quantities - Chemical potential - Gibbs- Duhem equation - partial molar volume - determination of partial molar quantities - Fugacity - Determination of fugacity - Thermodynamic derivation of Raoult's law.

UNIT – II

Surface phenomena and phase equilibria - Surface tension - capillary action - pressure difference - across curved surface (young - Laplace equation) - Vapour pressure of small droplets (Kelvin equation) - Gibbs-Adsorption equation - BET equation - Estimation of surface area - catalytic activity of surfaces – ESCA, X- ray fluorescence and Auger electron spectroscopy. **Surface active agents** - classification of surface active agents - Micellization - critical Micelle concentration (CMC) - factors affecting the CMC of surfactants, microemulsions - reverse micelles - Hydrophobic interaction.

UNIT - III

Effect of dilution on equivalent conductance of electrolytes - Anomalous behaviour of strong electrolytes. Debye Huckel-Onsagar equation - verification and limitations, conductometric titrations.

UNIT - IV

Chemical kinetics- Methods of deriving rate laws - complex reactions - Rate expressions for opposing, parallel and consecutive reactions involving unimolecular steps. Theories of reaction rates -collision theory - Steric factor - Activated complex theory - Thermodynamic aspects – Unimolecular reactions - Lindemann's theory - Lindemann-Hinshelwood theory. Reactions in solutions - Influence of solvent - Primary and secondary salt effects - Elementary account of linear free energy relationships - Hammet - Taft equation - Chain reactions - Rate laws of H₂-Br₂, photochemical reaction of H₂ - Cl₂, Decomposition of acetaldehyde and ethane - Rice-Herzfeld mechanism.

UNIT - V

Radioactivity and Isotopes: Introduction to radioactivity, properties of alpha rays, beta rays and gamma rays, theory of radioactive disintegration, rate of disintegration, Geiger – Nuttal rule, radioactive equilibrium. Isotopes - radioactive and non-radioactive isotopes, group displacement law. Analysis of isotopes – Aston's mass spectrograph, Dempster's method, Bainbridge's method. Separation methods of isotopes. Applications of Radio isotopes in Industry and medicine.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2019 FIRST SEMESTER Paper-IV :: Physical Chemistry - I

Time: 3 hours Maximum	Marks: 70
UNIT - I	
1 (a) Derive the Maxwell's thermodynamics relations.	(14M)– CO-2
(Or)	× ,
(b) Derive the Gibbs – Duhem equation.	(7M)– CO-2
(c) What is fugacity? Give its physical significance. Describe the different	
methods of determination of fugacity.	(7M)- CO-3
UNIT - II	
2. (a) Discuss the theory involved in ESCA, X – ray fluorescence and AES.	
How are these techniques used in the analysis of surfaces?	(14M)– CO-5
(\mathbf{Or})	$(A)A) \subset O 1$
 (b) How are surface active agents classified? Give examples. (c) What is CMC2. How is it determined? What are the factors offerting C 	(4M) – CO-1
(c) What is CMC? How is it determined? What are the factors effecting C	
UNIT - III	(10M)– CO-1
3. (a) How is solubility product determined from EMF measurements?	(6M) – CO-4
	(8M) - CO-4
(b) What is activity? How is activity coefficient determined from EMF? (Or)	(000) - CO-4
(c) Explain the principle of conductometric titrations.	(6M) – CO-4
(d) What is the effect of dilution on equivalent conductance of electrolytes?	
	(8M) – CO-1
UNIT – IV	
4. (a) Discuss the Lindemann's theory of unimolecular reactions.	(6M) – CO-3
(b) Discuss the kinetics of consecutive reactions.	(8M) – CO-2
(Or)	
(c) Derive the rate law for decomposition of acetaldehyde.	(5M) – CO-2
(d) Discuss structure-reactivity relationships using Hammet – Taft equation.	
	(4M) – CO-2
(e) Discuss the kinetics of $H_2 - Br_2$ reaction.	(5M) – CO-2
UNIT - V	
5 (a) Describe the properties of α , β and γ – rays.	(6M) – CO-1
(b) Explain the theory of radioactive disintegration.	(8M) – CO-1
(Or)	
(c) With the help of a diagram explain the Dempster's method.	(6M) – CO-5
(d) Describe the different methods of separation of isotopes.	(8M) – CO-5

CH2L1: INORGANIC CHEMISTRY

Subject Code	CH2L1	I A Marks	30
No. of Practical Hours / Week	6	End Exam Marks	70
Total Number of Practical Hours	80	Total Marks	100
Seminar		Exam Hours	06

	Course: Inorganic chemistry Lab (code CH2L1)				
S.No	S.No COURSE OUTCOMES				
	The student will be able to				
1	Memorize the basic principles involved in various methods of quantitative analysis.				
2	2 Comprehend the significance of various methods used in quantitative determination.				
3	Apply these methods for quantitative determination in their future 1 Endeavors.				
4	Interpret how far that these methods are useful in bringing out quantitative determination at various levels of constituent concentration.	1,3			
5	Evaluate how far these methods are accurate in quantitative determination.	1,4			

Quantitative analysis:

- 1) Determination of Zn(II) with potassium Ferro cyanide (Volumetric)
- 2) Complexometric titrations:
 - (a) Determination of Mg²⁺
 - (b) Determination of Ni^{2+} and
 - (c) Determination of hardness of water using EDTA
- 3) Determination of Fe^{3+} by a) photochemical reduction method b) Chemical reduction method.
- 4) Gravimetry(a) Determination of nickel using dimethyl glyoxime,
 - (b) Determination of Zn using di ammonium hydrogen phosphate

References:

M.Sc. DEGREE EXAMINATION

External Practical Model Paper

(Regulation 2017-2018)				
Time: 6 hours		Maximum Marks: 70		
1.	To write the principle and procedure / mechanism r practical as listed in the practical syllabus	related to - 5 M		
2.	Record Experiment (Procedure / Tabulation / calculation et	-10 M		
	Result / Graphs / Yield / Report	-5 M		

CH2L2: ORGANIC CHEMISTRY

Subject Code	CH2L2	I A Marks	30
No. of Practical Hours / Week	6	End Exam Marks	70
Total Number of Practical Hours	80	Total Marks	100
Seminar		Exam Hours	06

	Course: Organic chemistry Lab (code CH2L2)			
S.No	S.No COURSE OUTCOMES			
	The student will be able to			
1	Understand the solubility nature of organic substances of different functional groups.	1,7,2		
2	Get acquainted with the tests involved in identification of various functional groups.	1,6,2		
3	Apply the knowledge gained to identify various functional groups present in any organic compound.	1,6,2		
4	Analyze and report the given organic compound by using a systematic procedure.	2,5,7		

Qualitative Analysis of an organic compound.

Phenols, Carbonyl compounds (Aldehydes & Ketones), Acids, Nitro compounds, Amines, Amides, carbohydrataes and hydrocarbons. (one compound is to be given for analysis with preparation of one solid derivative).

M.Sc. DEGREE EXAMINATION

Interrnal Practical Model Paper	
(Regulation 2017-2018)	
Time: 6 hours	Maximum Marks: 30
1. Experiment	– 20 M
2. Result / Graphs / Yield / Report	- 10 M

CH2L3: PHYSICAL CHEMISTRY

Subject Code	CH2L3	I A Marks	30
No. of Practical Hours / Week	6	End Exam Marks	70
Total Number of Practical Hours	80	Total Marks	100
Seminar		Exam Hours	06

	Course: Physical Chemistry Lab (code CH2L3)			
S.No	COURSE OUTCOMES	PO`S		
	The student will be able to			
1	Remember the basic principle of redox titrations, P ^H - metry of strong	1,2,7		
	acids Vs bases, conductometry of strong acid Vs strong base and			
	Beer's law.			
2	Understand the basic principles of redox titrations, P ^H - metry of strong	1,2,7		
	acids Vs bases, conductometry of strong acids Vs strong bases and			
	Beer's law.			
3	To apply concepts of redox titrations, P ^H - metry and conductometry of	1,2,4		
	strong acids Vs bases and Beer's law in research and other allied fields.			

- 1. Potentiometric determination of Fe(II) with Cr(VI)
- 2. P^H- metric determination of strong acid with strong base.
- 3. P^{H} metric determination of strong acid + weak acid with strong base.
- 4. Conductometric titration of strong acid with strong base.
- 5. Conductometric titration of strong acid + weak acid with strong base
- 6. Verification of Beers Law using potassium permanganate/potassium dichromate.

<u>Semester – II - SYLLABUS</u> <u>W.E.F 2019 – 2020 Batch and Onwards</u> <u>COURSE OUTCOMES</u> <u>M.Sc.CHEMISTRY</u>

Subject Code	CH2T1	I A Marks	30
No. of Lecture Hours / Week	4	End Exam Marks	70
Total Number of Lecture Hours	60	Total Marks	100
Seminar		Exam Hours	03

CH2T1: GENERAL CHEMISTRY – II

Objectives: 1. To provide the required knowledge on symmetry elements and symmetry perations and in turn their use in understanding the active and inactive modes of vibrations in IR & Raman Spectroscopies.

2. To emphasize the changes possible in matter and electromagnetic radiation as a result of interaction between them.

3. To furnish the students with fundamental principles of magnetic spectroscopic studies and their application in establishing the structure of molecules.

	Course: General chemistry (code CH2T1)			
S.No	IO COURSE OUTCOMES			
	The graduate will be able to			
1	To remember the concepts of symmetry and group theory of chemistry,	2,7,1		
	microwave spectroscopy, Infrared spectroscopy, Raman spectroscopy,			
	visible and ultraviolet spectroscopy, nuclear magnetic resonance			
	spectroscopy electron spin resonance spectroscopy.			
2	To understand the concepts of symmetry and group theory in	1,7,2		
	chemistry, microwave, Infrared, Raman, visible and ultraviolet, nuclear			
	magnetic resonance and electron spin resonance spectroscopies.			
3	To apply concepts of symmetry and group theory, microwave, infrared,	5,6,1		
	raman, visible, ultraviolet, nuclear magnetic resonance, electron spin			
	resonance sprectroscopies.			
4	To analyse the role and significance of concepts of symmetry and	1,7,6		
	group theory in chemistry, microwave, infrared, raman, nuclear			
	magnetic resonance, electron spin resonance spectroscopies.			

UNIT-I

Symmetry and Group theory in Chemistry - Symmetry elements, symmetry operation, definition of group, sub group, relation between order of a finite group and its sub group. Point symmetry group. Schoenflies symbols, representation of groups by Matrices (representation for the Cn, Cnv, Cnh, Dn etc. groups to be worked out explicitly). Character of a representation. The great orthogonality theorem (without proof) and its importance. Character tables and their use. Application of group theory in IR and Raman spectroscopy.

Motion of molecules-Degrees of freedom –Energy associated with the degrees of freedom Types of spectra.

Microwave spectroscopy:

Classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, Intensities, non-rigid rotator-Microwave spectra of polyatomic molecules.

Infrared spectroscopy:

Harmonic oscillator, vibrational energies of diatomic molecules, zero point energy, force constant and bond strengths, anhormonicity Morse potential energy diagram. Vibration – rotation spectroscopy. PQR braches, Born – oppenheimer approximation, Break down Born – openheimer approximation, normal modes of vibration group frequencies, overtones, hot bands, application of IR spectra to polyatomic molecules.

UNIT – III

Raman spectroscopy

Classical and quantum theories of Raman effects, pure rotational, vibrational and Vibrational – rotational Raman spectra, selection rules, mutual exclusion principle, Resonance Raman spectroscopy, coherent antistrokes Raman Spectroscopy (CARS).

Visible and ultraviolet spectroscopy: - Electronic Spectra of diatomic molecules, vibrational structure of an electronic transition, classification of bands, rotational fine structure of electronic vibrational transition. Electronic Spectra of Polyatomic Molecules.

UNIT - IV

Nuclear Magnetic Resonance Spectroscopy: -

Nuclear spin, nuclear resonance, saturation, shielding of magnetic nuclei, chemical shift and its measurements, factors influencing chemical shift, desheilding, spin – spin interactions, factors influencing, coupling constant J. Classification (ABX, AMX, ABC, A2, B2 etc.) Basic ideas about NMR studies of nuclei other than proton – 13C, 19F, 31P. Use of NMR in medical diagnostics, Instrumentation.

Unit V

Electron spin resonance spectroscopy:

Basic principles, zero field splitting and krammers's degeneracy, factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, spin hamiltonian, Spin densities measurement techniques, Instrumentation, simple applications like methyl radical, ethyl radical etc.,

SUGGESTED BOOKS:

1.Fundamentals of Molecular spectroscopy: by C.N.Banwell

2.Introductory Group Theory for Chemists – George Davidson

- 3. Group theory for chemistry A.K.Bhattacharya
- 4.Molecular spectroscopy by B.K.Sharma
- 5. Vibrational Spectroscopy by D.N.Sathyanarayana New Age Int. Pub.
- 6. Spectroscopy by Aruldas.
- 7. Atomic Structure & Chemical Bonding Manaschanda, Tata McGraw Hill 4th edition, 2000.

B. Group Theory for Chemistry – A.K.Bhatacharya, Himalaya Publishing House – 1999, revised.
 Chemical Application of Group theory – F.A.Cotton, Wiley India Pvt. Ltd., - 3rd edition, 2008.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2017. SECOND SEMESTER

Paper-I :: General Chemistry - II

rape	(Regulation 2017-2018)	
Tir		Maximum Marks: 70
	UNIT - I	
1 (a) (b)	Explain the symmetry operations. Explain the classification of point groups.	(4M) – L - 2 (10M) – L - 2
(c) (d)	(Or) Write the significance of symmetry elements. Explain the construction of C_{2V} character table.	(4M) – L - 2 (10M) – L - 3
	UNIT - II	
2 (a) (b)	Explain the electromagnetic spectrum. Discuss the interaction of electromagnetic radiation with matter. (Or)	(4M) – L - 2 (4M) – L - 3
(c) (d)	Explain the applications of microwave spectroscopy. Discuss the effect of isotopic substitution on the Rotational Tra frequencies.	(8M) - L - 2 nsition (6M) - L - 3
	UNIT - III Explain the significance of mutual exculsion principle. Give an account on classical and quantum theories of Raman effe (Or)	(4M) - L - 2 ect. $(10M) - L - 2$
	Explain the Rotational fine structure of electronic vibrational tran Explain resonance Raman spectroscopy.	nsitions.(6M) – L - 2 (8M) – L - 2
	UNIT - IV	
4 (a) (b)	Explain nuclear resonance. Explain the shielding and deshielding of magnetic nuclei. (Or)	(4M) – L - 2 (10M) – L - 2
(c)	Write notes on the following (i) Chemical shift - L - 2 (ii) spin-spininteraction -L-2	(14M)
	UNIT - V	

5. (a) Give basic principles of ESR spectroscopy. (4M) - L - 2

(b)	Discuss the factors effecting the value of 'g'.	(10M) – L - 3
	(Or)	
(c)	Discuss about krammer's degeneracy.	(6M) – L - 2
(d)	Explain isotropic and anisotropic coupling constants in detail.	(8M) – L - 3

Subject Code	CH2T2	I A Marks	30
No. of Lecture Hours / Week	4	End Exam Marks	70
Total Number of Lecture Hours	60	Total Marks	100
Seminar		Exam Hours	03

CH2T2: INORGANIC CHEMISTRY – II

Objectives: 1.To emphasize the need and role of organometallic compounds and complexes as catalysts in large scale manufacturing procedures.

- 2.To accentuate the role of metal ions and other non metallic elements like sulphur, Phosphorus etc., in enzymes, transportation and storage processes.
- 3. To enumerate the role of molecular spectroscopy in understanding the structures

and

bonding aspects of metal clusters.

Course: Inorganic chemistry (code CH2T2)			
S.No	COURSE OUTCOMES	PO`S	
	The graduate will be able to		
1	Memorize the fundamental concepts of Metallic & non metallic	1,2	
	clusters, Inorganic reaction mechanisms, organo metallic chemistry,		
	electronic spectra & magnetic properties of complexes and		
	bioinorganic chemistry.		
2	Comprehend the basic and advanced concepts of metallic & non	1,6	
	metallic clusters, Inorganic reaction mechanisms, organo metallic		
	chemistry, electronic & magnetic properties of complexes and bio		
	inorganic chemistry.	1.0	
3	Apply the conceptual knowledge gained in the concepts of metallic &	1,2	
	nonmetallic clusters, inorganic reaction mechanisms, organo metallic		
	chemistry, electronic & magnetic properties of complexes and bio		
4	inorganic chemistry in other fields of chemistry as well as in research.	1.2	
4	Analyze the role of metallic & non metallic clusters / cages, inorganic reaction mechanisms, organo metallic chemistry, electronic &	1,3	
	magnetic properties of complexes in understanding the similarities and		
	differences among the concepts of chemistry.		
5	Assess that how far the concepts of metallic & non metallic clusters,	1,7	
5	Inorganic reaction mechanisms, organo metallic chemistry, electronic	1,7	
	& magnetic properties of complexes and bio inorganic chemistry are		
	useful in rendering theoretical explanations for the concepts in		
	chemistry.		
6	Exploit the core areas of metallic & non metallic clusters, Inorganic	1,5	
	reaction mechanisms, organo metallic chemistry, electronic &		
	magnetic properties of complexes and bio inorganic chemistry to		
	develop research strategies in chemistry.		

Non metal cages and metal clusters:

UNIT-I

Structure and bonding in phosphorous-oxygen, phosphorous-sulphur cages; structure and bonding in higher boranes with (special reference to B_{12} icosahedra). Carboranes, metalloboranes, metallocarboranes.

Metal clusters:

Classification- LNCs and HNCs , Isoelectronic and Isolobal relationships , electron counting rules: Wade's and Lauher's rules. M-M multiple bonding; preparation, structrure and bonding in dinuclear $[Re_2Cl_8]^{2-}$ ion, trinuclear $[Re_3Cl_9]$, tetra nuclear $W_4(OR)_{16}$, hexa nuclear $[Mo_6Cl_8]^{4+}$ and $[Nb_6Cl_{12}]^{+2}$, Applications of clusters.

UNIT-II

Organ metallic chemistry of transition metals:

Classification and electron counting rules, hapticity, synthesis, structure and bonding of Olefinic complexes, Acetylene complexes, ferrocene, dibenzene chromium, cyclo heptatriene and tropylium complexes of transition metals. Reactions of organometallic compounds - oxidative addition reductive elimination, insertion and elimination. Applications of organometallic compounds-Catalytic hydrogenation, Hydro formylation, Zeigler- Natta catalyst for polymerization of olefins.

UNIT III

Reaction mechanism of transition metal complexes:

Kinetics of octahedral substitution, acid hydrolysis, base hydrolysis -conjugate base (CB) mechanism. Direct and indirect evidences in favour of CB mechanism. Anation reactions. Reactions without metal-ligand bond cleavage. Factors affecting the substitution reactions in octahedral complexes. Trans effect on substitution reactions in square planar complexes.Mechanism of redox reactions, outer sphere mechanism, cross reactions and Marcus – Hush equation, inner sphere mechanism, complementary and non – complementary reactions.

UNIT IV

Term symbols and their derivation. Microstates, Hunds rules to predict ground terms and ground states. List of ground energy and higher energy terms from d^1 to d^9 configurations

Electronic spectra of transition metal complexes Electronic configurations and Spectroscopic terms. Selection rules, Slator–Condon parameters, Racah parameters, Term separation energies for d^n configurations Orgel diagrams. Tanabe- Sugano diagrams for d^1 to d^9 configurations. Calculations of Dq, B and β parameters. Charge transfer spectra.

UNIT-V

Bio-inorganic chemistry and Magnetic properties of complexes

Storage and transport of dioxygen by Hemoglobin and Myoglobin. Vitamin B_{12} and its importance.

Magnetic properties of transition metal complexes Types of magnetism, factors affecting Para magnetism, anomalous magnetic moments - Orbital and spin contribution, spin - orbit coupling and magnetic moments. Chiro optical properties, Cotton effect and Faraday effect.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2017. SECOND SEMESTER

Paper- II :: Inorganic Chemistry - II (Regulation 2017-2018)

]	Time: 3 hours	Maximum Marks: 70		
	UNIT - I			
1	. (a) Describe the bonding and structure in higher boranes.	(6M) – L - 2		
	(b) Write a note on metallo boranes.	(8M) – L - 1		
	(Or)			
	(c) Describe Isoelectronic and Isolobal relationships.	(4M) – L - 2		
	(d) Discuss the structure and bonding in $[Re_2Cl_8]^{2-}$ ion.	(10M) – L - 2		
	UNIT - II			
2.	(a) Explain the applications of organometallic compounds in	n catalytic		
	hydrogenation and hydro formylation.	(10M) - L - 3		
	(b) Define electron counting rules and hapticity.	(4M) - L - 1		
	(Or)			
 (c) Write the hapticity, structure and bonding of acetylene complexes.(7M) – L - 2 (d) Explain oxidative addition, reductive elimination of organometallic 				
	compounds.	(7M) - L - 2		
	UNIT - III			
3.	(a) Explain the outer sphere mechanism of redox reactions	s. (10M) – L - 2		
	(b) Write about Anation reactions.	(4M) - L - 2		
	(Or)	()		
	(c) Discuss the direct and indirect evidences in favour of co	njugate		
	base mechanism.	(10M)		
	(d) Write the difference between complementary and non-	complementary		
	reactions.	(4M)		
	UNIT - IV			
3.	(a) Define microstates and discuss how hunds rules can be	used to		
	predict ground terms and ground states.	(4M) – L - 3		

(b) Discuss the calculation of D_q and β parameters.	(10M) – L - 3			
(Or)				
(c) Draw the orgel diagram and Tanabe Sugano diagram for	d^2 and d^9			
configuration.	(8M) – L - 2			
(d) Explain charge transfer spectra.	(6M) – L - 2			
UNIT - V				
4. (a) Discuss the storage of dioxygen by myoglobin and write its importance.(8M)				
(b) Explain cotton effect.	(6M) – L - 2			
(Or)				
(c) Discuss the spin orbital coupling and magnetic moment	s of transition metal			
complexes.	(4M) – L - 2			
(d) Describe the factors affecting para magnetism.	(10M) – L - 2			

Subject Code	CH2T3	I A Marks	30
No. of Lecture Hours / Week	4	End Exam Marks	70
Total Number of Lecture Hours	60	Total Marks	100
Seminar		Exam Hours	03

CH2T3: ORGANIC CHEMISTRY - II

- **Objectives:** 1. To provide a good, solid ground in the basics of organic chemistry with a view to have application in various fields of advanced chemistry.
 - 2. To impart sound knowledge on the role of various intermediates in well known named reactions.
 - 3. To emphasize the need of protecting / deprotecting agents in organic synthesis.

Course: Organic chemistry (code CH2T3)		
S.No	COURSE OUTCOMES	PO`S
	The student will be able to	
1	Memorize the mechanisms involved in various types of reactions in organic chemistry.	1,7,2
2	Understand the basic and advanced concepts of general methods for synthesis, named reactions, nucleophilic substitutions, elimination reactions and protecting groups.	1,7,2
3	Apply the knowledge gained in establishing new mechanisms encountered in organic synthesis.	5,6,1
4	Distinguish between the various types of organic reaction mechanisms involved in organic synthesis.	1,7,2
5	Evaluate the type of mechanism involved in a particular organic reaction.	1,7,6

UNIT – I

General Methods for synthesis:

Additions: Addition to carbon – carbon multiple bonds, HX, X2, HOX, stereo chemistry of addition, formation and reaction of epoxides, syn and anti hydroxylation, hydrogenation(catalytic and Non catalytic), synthetic reactions of CO and CN and Cram's rule.

UNIT – II

Named Reactions:

Aldol (normal, crossed), claisen, Perkin, Stobbe, Knovenagel, Darzen, Reformatsky and Benzoin condensations. Grignard, Cannizzaro, Wittig and Wittig-Horner reaction, Dakin reaction.

C-C and C=C bond forming reactions – Mannich, Reimer-Tiemann, Vilsmeier-Haack and Ullmann reactions. Stork-enamine reaction. Shapiro, Peterson, Heck, Stille and McMurray reactions. Ring formation by Dieckmann, Thorpe and Acyloin condensations. Robinson ring annulation. Synthesis of small rings. Simon-Smith reaction.

UNIT-III

Aliphatic Nucleophilic substitutions:

The SN², SN¹, mixed SN¹ and SN² and SNⁱ reactions : Mechanism, effect of structure, nucleophile, leaving group on substitutions. The neighbouring group mechanism, neighbouring group participation by σ and π bonds, anchimeric assistance.

Aromatic Nucleophilic substitution:

The SN^{Ar}, SN¹ mechanisms and benzyne mechanism. Reactivity- effect of substrate structure, leaving group and attacking nucleophile. The Von-Richter, Sommelet – Hauser and Smiles rearrangements.

UNIT -IV

Eliminations Reactions:

Types of elimination (E1,E1CB,E2) reactions, mechanisms, stereochemistry and orientation, Hofmann and Saytzeff's rules, Syn elimination versus anti elimination. Competitions between elimination and substitution.

Dehydration, dehydrogenation, decarboxylative elimination, pyrolytic elimination, molecular rearrangement during elimination.

$\mathbf{UNIT} - \mathbf{V}$

Protecting groups:

Theory and importance of functional group protection and deprotection in organic synthesis:-Protecting agents for the protection of functional groups: Hydroxyl group, Amino group, Carbonyl group and Carboxylic acid group

carbon-carbon multiple bonds; chemo- and regioselective protection and deprotection. Illustration of protection and deprotection in organic synthesis.

Books suggested:

- 1. Advanced organic chemistry reaction, mechanism and structure, Jerry March, John Wiley.
- 2. Advanced organic chemistry, F.A.Carey and R.J.Sundberg, Plenum.
- 3. A guide book to Mechanism in organic chemistry, Peter Sykes, Longman.
- 4. Organic chemistry, I.L.Finar, Vol. I & II, Fifth ed. ELBS, 1975.
- 5. Organic chemistry, Hendrickson, Cram and Hammond (Mc Graw Hill).
- 6. Modern organic Reactions, H.O.House, Benjamin.
- 7. Structure and mechanism in organic chemistry, C.K.Ingold, Cornell University Press.
- 8. Principles of organic synthesis, R.O.C.Norman and J.M.Coxon, Blakie Academic & Professional.
- 9. Reaction Mechanism in Oganic Cemistry, S.M.Mukherji and S.P.Singh, Macmillan.
- 10. Basic Principles of Organic Chemistry by J. B. Roberts and M. Caserio.
- 11. Protecting groups in Organic chemistry, T.W.Greene, Wiley inferscience, publishers, New York.
- 12. Protecting Groups in Organic chemistry P.J.Kocienski, George thiemevers.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2017. SECOND SEMESTER

Paper-III :: Organic Chemistry - II (Regulation 2017-2018)				
Tin		ximum Marks: 70		
	UNIT - I			
1 (a)	Define and explain CRAMS rule.	(4M) - L - 1		
(b)	Give an account of the addition of the following to carbon carbon n			
	bonds (i) HX (ii) HOX	(10M) – L - 2		
	(O r)	· · · ·		
(c)	Write a note on the formation and reactions of epoxides.	(6M) – L - 2		
(d)	Discuss in detail about the following			
	(i) Syn and Anti hydroxylation (ii) Hydrogenation	(8M) – L - 2		
	UNIT - II			
2.(a)	Explain the mechanism and applications of Stork-enamine reaction	n. $(4M) - L - 2$		
(b)	Define and Discuss the mechanism of the following reactions			
	(i) Benzoin condensation (ii) Reformatsky reaction	(10M) – L - 2		
	(Or)			
(c)	Explain the mechanism and stereochemistry of Wittig reaction.	(6M) – L - 2		
(d)	Define and Discuss the mechanism of the following reactions			
	(i) Perkin condensation (ii) Dakin reaction	(8M) – L - 2		
	UNIT - III			
3 (a)	What is anchimeric assistance. Discuss neighbouring group particip	nation by		
5 (a)	σ and π bonds.	(10M) - L - 2		
(b)	Write the mechanism of SN^2 reaction.	(10M) - L - 2 (4M) - L - 2		
(0)	(Or)	(4101) - 12 - 2		
(c)	Discuss factors affecting aromatic substitution reactions.	(6M) – L - 2		
(d)	Explain the following (i) Benzyne mechanism (ii) SN ^{Ar} mechanism			
(u)	Explain the following (1) beinzyne meenanism (1) Siver meenanism	$(000) = \mathbf{L} - \mathbf{I}$		
	UNIT - IV			
4 (a) Explain the mechanism and stereochemistry of E2 reaction with	suitable		
(examples.	(6M) – L - 2		
	(b) (i) Discuss pyrolytic eliminations. (ii)Write a note on dehydratio	. ,		
	(Or)			
(c) Explain Hoffmann and Saytzeff's rule with suitable examples.	(6M) – L - 2		
(d) Write an account of (i) E1CB mechanism	(8M) - L - 2		
	UNIT - V			
1 (a) 1	1 (a) Explain the importance of functional group protection in organic synthesis.(8M) – $L - 2$			
(b)	(b) Discuss about the protecting agents to protect the following functional			
	groups (i) AMINO group (ii) Carboxylic Acid.	(6M) – L - 3		
	(Or)			
(c) V	(c) Write a short note on Chemo and Regio selective protection and			
	deprotection of carbon carbon multiple bonds.	(8M) – L - 2		

(d) List out the reagents and apply them for the protection and deprotection of hydroxyl and carbonyl groups. (6M) – L - 2

Seminar		Exam Hours	03

CH2T4: PHYSICAL CHEMISTRY - II

- **Objectives:** 1. The main objective of the course is to provide a basic understanding of the core areas of physical chemistry based around the systems, states and thermodynamic processes, chemical thermodynamics, kinetics.
 - 2. The object of this course is to provide basic and applied knowledge of polymers and photochemical reactions happening around us in nature.

Course: Physical chemistry (code CH2T4)		
S.No	COURSE OUTCOMES	PO`S
	The student will be able to	
1	Remember the concepts of thermodynamics, polymer chemistry,	1,2,7
	electro chemistry, chemical kinetics and photo chemistry.	
2	Understand the concepts of thermodynamics, polymer chemistry,	1,2,7
	electro chemistry, chemical kinetics and photo chemistry.	
3	Apply the concepts of thermodynamics, polymer chemistry, electro	1,2,4
	chemistry, chemical kinetics and photo chemistry in research and other	
	allied fields.	
4	Analyze the role and significance of concepts of thermodynamics,	1,2,7
	polymer chemistry, electro chemistry, chemical kinetics and photo	
	chemistry.	
5	Evaluated the role of concepts of thermodynamics, polymer chemistry,	1,2,7
	electro chemistry, chemical kinetics and photo chemistry in	
	understanding the named concepts in chemistry.	

UNIT – I

Thermodynamics II : Third law and Statistical thermodynamics-Nernst Heat theorem -

Third law of thermodynamics - Its limitations - Determination of absolute entropy - concept of distribution - Thermodynamic probability and most probable distribution - Maxwell-Boltzmann distribution law - Partition function - Fermi-Dirac statistics - Bose Einstein statistics - Entropy and probability - Boltzmann-Plank equation - calculation of thermodynamic properties in terms of partition function - Application of partition function - Chemical equilibrium and partition function.

UNIT – II

Polymer chemistry:

Classification of polymers - Free radical, ionic and Zeigler -Natta Polymerisation - kinetics of free radical polymerisation - Techniques of polymerisation - Glass transition temperature - Factors influencing the glass transition temperature - Number average and Weight average, Molecular weights –molecular weights determination - End group analysis - Osmometry - Light scattering and ultra centrifugation methods.

UNIT – III

Electro Chemistry-II: Electrode potentials - Double layer at the interface - rate of charge transfer - Decomposition potential - Over potential - - Tafel plots - Derivation of Butler-Volmer equation for one electron transfer - electro chemical potential.

Electro catalysis - Fuel cells-Theory of polarography - Diffusion current - Ilkovic equation – Equation for half- wave potential –Applications of polarography - Amperometric titrations - Corrosion - Forms of corrosion - prevention methods.

UNIT – IV

Chemical kinetics and photo chemistry - Branching Chain Reactions - Hydrogen-oxygen reaction - lower and upper explosion limits - Fast reactions - Study of kinetics by flow methods - Relaxation methods - Flash photolysis - Mechanism of homogeneous catalysis - Acid base catalysis - protolytic and prototropic mechanism - Enzyme catalysis - Michelis-Menten kinetics – Electron transfer reactions – Marcus theory – Dynamics of electron tunneling in the Marcus theory, The Marcus cross relation.

UNIT – V

Photochemical reactions - Quantum yield and its determination - Actinometry - Reactions with low and high quantum yields - Photo sensitisation - Exciplexes and Excimers - Photochemical equilibrium - Chemiluminescence-Kinetics of collisional quenching-Stern - Volmer equation - Photo Galvanic cells, consequences of light absorption Jablonski diagram, Laws of photochemistry – Grotthuss draper law, Stank Einstein's law of photochemical equations.

SECOND SEMESTER

Paper-IV :: Physical Chemistry - II

1 apri	(Regulation 2017-2018)				
Tim	Time: 3 hours Maximum Marks: 70				
	UNIT - I				
1. (a)	Define third law of thermodynamics and write its limitations.	(4M) – L - 2			
(b)	· · · · · · · · · · · · · · · · · · ·	(10M) - L - 3			
	(Or)	· · · · · · · · · · · · · · · · · · ·			
(c)	Explain Fermi-dirac statistics.	(6M) – L - 3			
(d)	Describe thermodynamic probability and most probable distr				
()					
	UNIT - II				
2. (a)	What is glass transition temperature and discuss the factors in	fluencing			
	the glass transition temperature.	(6M) - L - 3			
(b)	Explain the differences between weight average and number	average of a			
	polymer in detail.	(8M) – L - 3			
	(Or)				
(c)	Describe Zeigler-natta polymerization.	(6M) – L - 2			
(d)	Explain the osmometry method of a molecular weight of a p	olymer in			
	detail.	(8M) – L - 3			
	UNIT - III				
3.(a)	Describe the potentiometric titrations and write its advantages	s. $(7M) - L - 2$			
(b)	Write a note on over potential and tafel plots.	(7M) – L - 2			
	(Or)				
(c)	Discuss the metal-metal ion electrodes and membrane electro				
(d)	Derive buttler – volmer equation.	(8M) – L - 3			
	UNIT - IV				
4 (a)	Define quantum yield and write its determination.	(6M) - L - 2			
(b)	Describe the study of kinetics by flow methods.	(8M) – L - 3			
	(Or)				
(c)	Define acid-base catalysis and write protolytic and phototrop				
(1)		(M) - L - 2			
(d)	Write a note on photo galvanic cells.	(8M) – L - 3			
	UNIT - V				
5 (a)	Discuss quantum yield and explain its determination by actino	motry (6M) I 3			
5(a)		(8M) - L - 2			
(b)	Derive stern-volmer equation. (Or)	(01V1) - L - Z			
(a)	Explain the following in detail (i) Chemiluminescence				
(c)	(ii) Exciplexes and Excimers.	(14M)– L - 2			
	(ii) Exciptoxes and Exemicis.	(1 + 1) = L - L			

CH3L1: ORGANIC PREPARATIONS

Course: Organic Preparations (CH3L1)		
S.No	COURSE OUTCOMES	PO`S
	The graduate will be able to	
1	Memorize the principle involved in various organic preparations.	2,5,7
2	Understand the mechanism involved in organic preparation.	1,2
3	Apply the knowledge of organic preparations in their chosen field.	3,4,6

Preparation of organic compounds: Three stage preparations by reactions involving nitration, halogenation, oxidation, reduction, alkylation, acylation, condensation and rearrangement. (A student is expected to prepare at least five different organic compounds by making use of the reactions given above).

CH3L2: MIXTURE ANALYSIS

Course: Mixture Analysis (CH3L2)		
S.No	COURSE OUTCOMES	PO`S
	The post graduate will be able to	
1	Get familiarized with the tests involved in identification of various functional groups.	1,2,6
2	Understand the theory involved in identification and separation of the given organic mixture based on the solubility.	1,5,7
3	Apply the knowledge to identify various functional groups present in the given organic compound by using a systematic procedure.	1,3,4

Analysis of organic binary mixtures: Separation and identification of organic binary mixtures

(The students must be given training in atleast 6 mixtures with different functional groups).

Note: For semester end examinations the student has to submit at least two solid derivatives for each individual component.

CH3L3: GREEN ORGANIC PREPARATIONS

Practical : Green Organic Preparations (CH3L3)		
S.No	S.No COURSE OUTCOMES PO	
	The post graduate will be able to	
1	Memorize the principles of green chemistry	2,7
2	Understand the mechanism of some of the green synthetic methods.	1,6,7
3	Apply principles of green chemistry in designing organic synthesis.	5,1,3

Green Procedures for organic qualitative analysis and organic compound preparations (atleast 6 preparations).

M.Sc.CHEMISTRY - III - SEMESTER

CH3T1: ORGANIC SPECTROSCOPY

Course: Organic Spectroscopy (code CH3T1)		
S.No	COURSE OUTCOMES	PO`S
	The graduate will be able to	
1	Memorize the basic principles and theory involved in molecular	2,7
	absorption spectroscopy.	
2	Comprehend the advanced concepts of molecular absorption	1,2,5
	spectroscopy.	
3	Apply the knowledge of spectroscopy in establishing the structure of	1,5,7
	organic molecules.	
4	Analyze the spectral data to ascertain the structure of unknown	1,4,2
	molecules.	

UNIT- I

UV- Visible Spectroscopy:

Mechanics of measurement – Energy transitions – Simple chromophores – Auxochrome, Absorption shifts (Bathochromic shifts, Hypsocromic shift, Hyper chromic shift, Hypo chromic shift). UV absorption of Alkenes – polyenes, unsaturated cyclic systems.

UV absorption of Carbonyl compounds α , β -unsaturated carbonyl systems - UV absorption aromatic systems – solvent effects – geometrical isomerism – acid and base effects – typical examples – calculation of λ max values for simple molecules using Woodward -Fieser rules.

IR Spectroscopy:

Mechanics of measurement – Fundamental modes of vibrations -Stretching and bending vibrations – Factors effecting vibrational frequency-hydrogen bonding.

UNIT – II

Finger print region and its importance. Typical group frequencies for – CH,

-OH, -NH, -CC, -CO and aromatic systems - Application in structural determination Examples – simple problems.

UNIT – III

Nuclear Magnetic Resonance Spectroscopy (1HNMR – First Order PMR):

Introduction:

Nuclear spin- Basic principle of -NMR - nuclear resonance –saturation-Larmor's frequency-Relaxation- Instrumentation(Cw and FT) shielding and de shielding of magnetic nuclei- chemical shift and its measurements, factors influencing chemical shift, spin–spin interactions and factors influencing spin -spin coupling- Dynamic NMR- coupling constant J. and factors effecting J value.

UNIT – IV

Mass Spectrometry I

Introduction- ionization methods-EI, CI, ES, MALDI and FAB – advantages and disadvantagesmolecular ion peak and its importance, meta stable peak, Nitrogen rule and extension of nitrogen rule. Determination of Molecular weight and determination of molecular formulae- Isotopic Peaks- Identification of single chlorine atom and double chlorine atom single bromine atom and double bromine atoms in organic compounds. Instrumentation.

UNIT – V

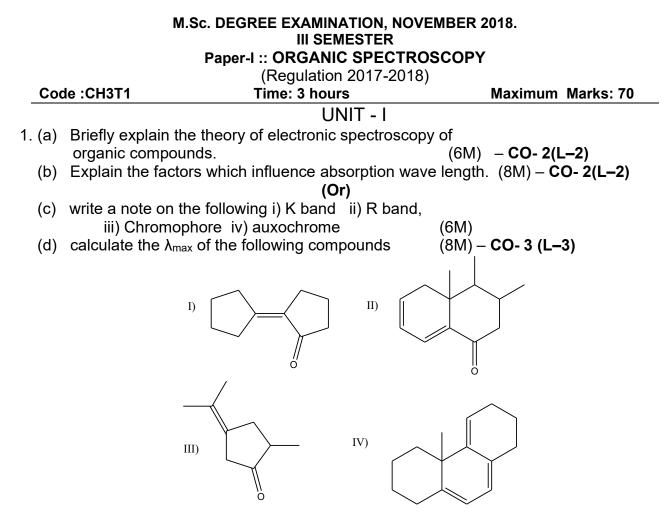

Mass Spectrometry II

Fundamental fragmentation process- Stevenson's rule- radical site initiated cleavage-charge site initiated cleavage- two bond cleavage- Retrodielalder cleavage- Mc-Lafferty rearrangement and other cleavages. Mass spectral fragmentation of alkanes, cycloalkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, phenols, thiols, ethers, carbonyl containing compounds (Aldehydes, ketones, esters and carboxylic acids), nitrogen compounds, alkyl chlorides and alkyl bromides, Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

- 9. Organic structures from spectra –Field L.D., Kalman J.R. and Sternhell S. 4th Ed.John Wiley and sons Ltd.

The highlighted syllabus will be taught online due to COVID – 19 pandemic.

UNIT - II

2. (a) The carbonyl stretching absorptions for the following lactones are 174; 1720; 1760 cm-1 . Match the absorptions with the appropriate structure and give a reason for each choice (4M) – **CO-4 (L–4)**

- (b) How do you distinguish the following pairs of compounds by using IR spectroscopy? (10M) – **CO- 4(L-4)**
 - I) Maleic acid and Fumaric Acid
 - II) CH₃CH₂CHO and CH₃COCH₃
 - III) CH₃COOH and HCOOCH₃
 - IV) Benzene and Cyclohexane

V) p-Nirto aniline and o- Nitro aniline

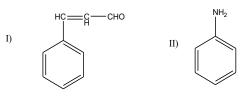

(Or)

- (c) Discuss about the following
 - i) Fermi resonance ii)Finger print region iii)Bending vibrations(8M) co- 2(L-2)
- (d) How do you distinguish 1^{0} , 2^{0} , 3^{0} amines by using IRspectroscopy

(6M) - CO- 2(L-2)

UNIT - III

- 3. (a) Define Chemical shift. Give an account on Chemical exchange in NMR(6M)
 - (b) Predict the number of signals and their chemical shift in each of the following compounds (8M) CO- 3(L–3)

(Or)

(c) A compound of Molecular weight 122, in its PMR Spectrum shows 1.4(T,3H) .0(Q,2H),6.8-7.2(M,5H). Write structure of compound using above data.

(6M) – CO- 3(L–3)

(d) Explain the coupling constant in NMR and describe about various types of coupling constants (8M) – **CO- 3(L–3)**

UNIT - IV

- 4 (a) The mass spectrum of an unknown compound shows a molecular ion peak at m/z =78 with a relative intensity of 23.6 and the relative intensities of the isotopic peaks are as follows m/z 79(1.00), 80(7.55), 81(.25) .what is the molecular formula of this unknown?
 - (b) Write explanatory notes on I) Molecular ion II) Rearrangement ions
 III) Base peak (6M) CO- 2(L–2)

(Or)

- (c) what is the principle of mass spectrometry?. Discuss some quantitative and qualitative applications of mass spectrometry (8M) CO- 2(L–2)
- (d) Write a note on the following

 (i) Nitrogen rule
 (ii) FAB ionization method
 (6M)
- 5 (a) In the mass spectrum of 1-hexanol, a very weak molecular ion peak appears at m/z = 102. Some other prominent peaks appear at m/z values of 00,99,84 56(base peak) and 31. What are the most probable species responsible for the above mentioned peak positions. (8M) CO-3(L-3)

(b) Discuss the prominent peaks at m/z = 78, 77,53,51,50 and 39 in mass spectrum of benzene (6M) – **CO- 3(L–3)**

```
(Or)
```

- (c) How mass spectrum is useful to distinguish between 1^{0} , 2^{0} , 3^{0} aliphatic amines? (8M) - **CO- 4(L-4)**
- (d) Illustrate Mc Lafferty rearrangement with suitable examples (6M) CO- 2(L-2)

CH3T2: ORGANIC REACTIONS, MECHANISMS & GREEN CHEMISTRY

	Course: Organic Reactions, Mechanisms & Green Chemistry (code CH3T2)		
S.No	COURSE OUTCOMES	PO`S	
	The student will be able to		
1	Acquire sound knowledge of methods for determining organic reaction mechanisms, photochemistry, pericyclic reactions and green chemistry.	2	
2	Understand the concepts involved in methods for determining organic reaction mechanisms, photochemistry, pericyclic reactions and green chemistry.	1,7	
3	Apply the concepts learnt in predicting the detailed mechanisms pertaining to various concepts like methods for determining organic reaction mechanisms, photochemistry, pericyclic reactions and green chemistry.	1,5	
4	Analyze and differentiate the pattern of mechanism involved in methods for determining organic reaction mechanisms, photochemistry, pericyclic reactions and green chemistry.	1,7	

UNIT-I

Methods for determining Reaction mechanisms by kinetic and non-kinetic studies:

Kinetics of reaction, Energy profile diagram, Intermediate versus transition state, Reaction rate and rate limiting step, kinetic versus thermodynamic control, Identification of products,

Testing possible intermediates, trapping of intermediates, Cross over experiments, Isotopic labeling.

UNIT-II

Photo chemistry:

Photochemical processes: Energy transfer, sensitization and quenching. Singlet and triplet states and their reactivity. Photochemistry of olefins – conjugated olefins, Aromatic compounds–isomerisation– additions. Photochemistry of carbonyl compounds – Norrish type I and II reactions –Paterno – Buchi Reaction.

Photo reduction, Photochemical rearrangements – Photo Fries rearrangement, Di-π-methane rearrangement, Barton reaction and photo-Fries rearrangement reaction.

UNIT-III

Pericyclic Reactions – I:

Definition, classification of pericyclic reactions, MO theory, electronic configuration in ground and first excited states of aliphatic conjugated polyene system like 1,3-Butadiene, 1,3,5 – Hexatriene, allyl system.

Electro cyclic reactions, Mechanism, Stereochemistry, conrotatory and disrotatory motions of 4n and 4n+2 systems. PMO & FMO methods, correlation diagrams, Woodward & Hoffmann rules. **Cyclo additions:**

Mechanism, stereochemistry, Antarafacial and suprafacial additions, PMO & FMO and correlation diagram of (4n) and (4n+2) systems, Woodward and Hoffmann rules.

UNIT-IV

Pericyclic Reactions – II:

Sigmatropic rearrangements, classification, mechanism and FMO and 7 PMO approach under thermal and photochemical conditions, suprafacial and antarafacial shifts of Woodward and Hoffmann rules.

Detailed treatment of claisen, cope rearrangements fluxional molecules, aza-cope rearrangements.

UNIT-V

Green chemistry:

Green chemistry :Introduction, Principles & concepts of Green chemistry, Green Catalysis, Biocatalysis, renewable resources, Green Reagents, examples of green reactions-synthesis of Ibuprofen, Clean Fischer-Indole synthesis comparison of the above with conventional methods.

Introduction to Microwave organic synthesis: Applications: solvents (water and organic Solvents), solvent free reactions (solid state reactions).

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. III SEMESTER Paper-II :: ORGANIC REACTIONS, MECHANISMS & GREEN CHEMISTRY (Regulation 2017-2018)

	(Regulation 2017-2018)	
Code: CH3T2	Time: 3 hours	Maximum Marks: 70
	UNIT - I	
1.a) Write a short note on i	sotopic labeling.	4M – CO- 2(L–2)
b) Explain the following:		10M – CO- 2(L–2)
i) Cross over experime		
ii) Intermediate stage		
	(Or)	
 c) Explain the following: i) Trapping of intermed 	diatas	10M – CO- 2(L–2)
ii) Testing possible inf		
, .	e and rate limiting step.	4M – CO- 2(L–2)
	UNIT - II	
2. a) Discuss norrish type	– I and type – II cleavages.	6M – CO- 2(L–2)
b) Discuss the following		8M – CO- 2(L–2)
i) Photochemistry of a		
ii)Peterno-Buchi Read	•	
ii)i eterno-buchi iteat	(Or)	
c) Write the mechanism of	f the following photochemical rearra	ngements, 8M - CO- 3 (L-3)
i) Barton reaction		
ii) Photo-Fries rearrang	ement	
d) Give a detailed accoun	It of photoreduction.	6M – CO- 2(L–2)
	UNIT - III	
	obutene allows thermally conrotatio	
	by correlation diagram method.	8M – CO- 3 (L–3)
b) Define the words		6M– CO- 1 (L–1)
i) Disrotation ii) Conrotation		
iii) Suprafacial addition		
)	(Or)	
c) Discuss the application	of FMO method in cycloaddition to	4n+2 system. 8M – CO- 2(L–2)
	offmann rules for thermal and photo	
4n and 4n+2 electron sy	ystem.	6М – СО- 1 (L–1)
	UNIT - IV	
	e rearrangement reaction with exam	
	l antrafacial process?. Apply PMO n	
analysis of [1,5] sigma		8M – CO- 3 (L–3)
	(Or)	
	earrangement reaction with suitable	
	.Apply this method to 1,3 sigma trop	
selection rules by PMO	UNIT – V	6м – СО- 3 (L–3)
5.a) Write notes on green re		4M- CO- 2(L-2)
b) Explain the principles of		10M
	(Or)	1011
c) Explain the theory and r	principle of Microwave (MW) organi	c synthesis. 8M – CO- 2(L–2)
	sis of Ibuprofen and compare with th	
method.	-	6M – CO- 4 (L–4)

CH3T3 B: ASYMMETRIC SYNTHESIS, PHOSPHORUS & SULPHUR REAGENTS, SYNTHETIC POLYMERS, BIOMOLECULES & BIO ORGANIC CHEMISTRY

Co	Course: ASYMMETRIC SYNTHESIS, PHOSPHORUS & SULPHUR REAGENTS, SYNTHETIC POLYMERS, BIOMOLECULES & BIO ORGANIC CHEMISTRY (code CH3T3B)		
S.No	COURSE OUTCOMES	PO`S	
	The student will be able to		
1	Memorize the concepts of asymmetric synthesis, formation of carbon double bond, synthetic polymers, biomolecules and bio inorganic chemistry.	1,2,4,7	
2	Comprehend various organic synthesis.	1,2,4,7	
3	Apply the conceptual knowledge gained in determining the mechanism involved in asymmetric synthesis, as well as reactions involving various reagents.	1,2,7	
4	Analyse as to how far various reagents are useful in carrying out asymmetric synthesis and other organic reactions.	1,3,4	
5	Evaluate the role of various reagents in asymmetric synthesis and other organic reactions.	1,2,6,7	

UNIT – I

Asymmetric Synthesis

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT – II

Phosphorus Reagents

Formation of carbon-carbon double bonds-Functional group transformations – deoxygenation reactionsreactivity as electrophiles- conversitoon of alcohols to alkyl halides, Witting reaction and nucleophiles -Corey-Winters reaction, Michaelis-Arbusov reaction-Perkow reaction and Mitsnobu reaction.

Sulphur Reagents- Sulphur ylides, stabilized and non-stabilized – Preparation and reactivity Pummerer reaction – sulphonyl carbanions-Julia reaction.

UNIT – III

Synthetic Polymers

Polymer Reactions-Addition and condensation polymerization processes- Bulk, Solution, Suspension and Emulsion polymerization.

Stereospecific Polymers-Preparation and significance- classification of polymers based on physical properties-Thermoplastics-Thermosetting plastics-Fibers and elastomers- General applications.

Preparation of Polymers-Preparation of Polymers based on different types of monomers Industrial applications-olefin polymers-Diene polymers-nylons-Glyptal resins-Urea-formaldehyde, phenol-formaldehyde and melamine resins- Epoxy resins - Ion exchange resins.

Biomolecules

Peptides and Proteins-Methods of peptide synthesis, sequence determination, structure of oxytocin, proteins-classification, structure, conformation and properties. Nucleic acids- Nucleosides, Nucleotides, DNA and RNA, structure and conformations, replication, translation of genetic material, genetic code, gene expression, gene mutation, protein synthesis.

ons, replication, translation of genetic material, genetic code, gene expression, gene mutation, protein synthesis.

UNIT – IV

UNIT – V

Bioorganic Chemistry

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition- Blood group substances

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. III SEMESTER PAPER – III: ASYMMETRIC SYNTHESIS, PHOSPHORUS & SULPHUR REAGENTS, SYNTHETIC POLYMERS, BIOMOLECULES & BIO ORGANIC CHEMISTRY

(Regulation 2017-2018)

	(Regulation 2017, 2010)	
Code: CH3T3 B 70	Time: 3 hours	Maximum Marks
	UNIT– I	
1. a) Explain Diastereo se	electivity and enantio selectivity	6M
b) Briefly explain subst	rate controlled methods Or	8M
c) Explain the following	: i) chiral auxiliaries, ii)alkylation of	f chiral imIres. 6M
d) Explain Diels-alder	reaction.	8M
	UNIT – II	
, I S	roup transformations and deoxyger ey-winters reaction ii) michaelis – a Or	
c) Discuss about witting		6M
d) Explain the following i) Pummerer reaction		8M

UNIT – III

 3. a) Discuss about : i) condensation polymerization, ii)emulsion polymerization. b) How to classify the polymers based on physical properties. Explain. 8M Or 	6M
 c) Give a Brief note on thermo plastic and thermo setting plastics. d) Discuss about i) polymers – nylon – gliptol ii) Apoxyresin 	
UNIT – IV	
4. a) Define peptides. Write peptide synthesis.10Mb) How do you classify the proteins?4MOr	
c) Draw the structures of DNA and RNA.6Md) Write brief note on :8M	
i) Genetic code ii) Gene expression	
UNIT – V

aboratories. 8M

CH3T3A: ORGANIC SYNTHESIS

	Course: Organic Synthesis (code CH3T3A)		
S.No	COURSE OUTCOMES	PO`S	
	The student will be able to		
1	Acquire knowledge and understanding of essential facts, concepts, principles and theories related to formation of $C - C$ single bond and double bond, Diel's Alder related reactions, unactivated $C - H$ bonds and disconnection approach in organic synthesis.	2	
2	Understand the role and significance of formation of $C - C$ single bond and double bond, Diel's Alder related reactions, unactivated $C - H$ bonds and disconnection approach in organic synthesis.	1,7	
3	Apply the conceptual knowledge gained in formation of $C - C$ single bond and double bond, Diel's Alder related reactions, unactivated $C - H$ bonds and disconnection approach in organic synthesis to synthesize organic molecules.	1,6	
4	Analyze the role of various reagents in carrying out the organic reactions like formation of C – C single bond and double bond, Diel's Alder related reactions, unactivated C – H bonds and disconnection approach in organic synthesis.	1,7	

UNIT-I

Formation of carbon-carbon single bonds:

Alkylations of relatively acidic methylene groups, alkylations of ketones, enamine and related reactions, umplong (dipole inversion).

Allylic alkylation of alkenes, alkylation of α -thicarbonions- α -selenocarbonions, formation of carbon carbon single bonds by the addition of free radicals to alkenes, synthetic applications of carbones and carbonoids.

UNIT-II

Formation of carbon-carbon double bonds

Pyrolytic syn elimination reactions sulphoxide-sulphonate rearrangement, synthesis of allyl alcohols, the witting reaction, alkenes from sulphones, decarboxylation of β-lactones, alkenes.

Stereo selective synthesis of tri and tetra substituted alkenes, oxidative decarboxylation of carboxylic acids, stereospecific synthesis from 1,2-diols, reductive dimerization of carbonyl compounds.

UNIT-III

Diels–Aider and related reactions: The dienophile, heterodienophile, oxygen as dienophile, The diene, acyclic dienes, heterodienes, 1,2-dimethylene cycloalkanes, vinyl cycloalkenes, and vinyl arenes, cyclic dienes and furans.

Intra molecular Diels – Alder reactions, stereochemistry and mechanism of Diels – Alder reaction, retro Diels – Alder reaction, catalysis by lewis acids, photosensitized Diels- Alder reactions and 1,3-dipolar cycloaddition reactions.

UNIT-IV

Reactions at unactivated C-H bonds

The Hoffmann – Loeffler – Freytag reaction. The Barton reaction and related processes, photolysis of organic nitrites and hypohalites, photolysis of Nnitrosoamides.

Reaction of monohydric alcohols with lead tetraacetate, Miscellaneous reactions unsaturated alcohols from hydroperoxides.

UNIT-V

Disconnection approach

Introduction to Retro-synthetic analysis, Disconnection approach with suitable examples, Definitions: FGI, Disconnection, synthons, synthetic equivalent, reagent, target molecule, General strategy: choosing a disconnection, greatest simplification, symmetry, high yielding steps, recognizable starting materials.

Chemo, regio and stereo selectivity with examples. One group C-C disconnections-Alcohols, carbonyl compounds, alkene synthesis, two group disconnections: 1,3 – dicarbonyl compounds, α , β – unsaturated carbonyl compounds.

CH3T4 A: ENVIRONMENTAL CHEMISTRY AND ANALYSIS

	Course: ENVIRONMENTAL CHEMISTRY AND ANALYSIS (code CH3T4	IA)
S.No	COURSE OUTCOMES	PO`S
	The student will be able to	
1	Memorize the concepts of envirometry and its analysis.	
2	Understand the basic significance of segments of environment and soil erosion, soil fertility as well as soil analysis	
3	Apply the knowledge of environmental chemistry in addressing the present environmental conditions.	
4	Analyse different problems related to environmental issues.	
5	Evaluate that how far the existing solutions related to environmental issues can be useful to overcome the novel problems of environment.	

UNIT-I

Significance of basic segments of Environment-Nomenclature in the study of Environmental Chemistry., SOIL CHEMISTRY & POLLUUTION STUDIES:Principles of weathering-effect of temperature, water, air, plants and animals on weathering., Soil formation/development-factors affecting soil developmentphysical properties of soil; soil colloids-ion exchange proerties.,Soil fertility, productivity- Soil nutrientsmicro and macro.

UNIT II

STUDY OF WATER POLLUTION AND MONITORING AND TREATMENT METHODS OF WATER POLLUTANTS: Hydrosphere-water resources-hydrological cycle-unique properties of water- water quality parameters., Pollution from Domestic water ,industrial, agricultural, solid waste, shipping, radioactive waste & thermal pollution, Effect of specific pollutants like mercury, lead, arsenic, selenium, nitrates, oil.,

Unit- III

Effects of soaps, detergents, pesticides, hydrocarbon with regard to water pollution., Techniques of water treatment-Primary, secondary and tertiary methods-use of coagulants-flash distillation-solar stills, ion exchange reverse osmosis, electro dialysis.

UNIT -IV

STUDY OF AIR POLLUTION AND MONITORING AND TREATMENT METHODS IN CASE OF AIR POLLUTION: Atmospheric sources and emission of air pollutants-carbon monoxide-sulphur ,oxides-oxides of nitrogen,organic pollutants and photo chemical smog-particulates-acid rain and radioactive substances. Continuous monitoring of air pollutants-Principles,Monitoring instruments,monitoring of sulphur dioxide,hydrogen sulphide,oxides of nitrogen, oxides of carbon, hydrocarbons, ozone and suspended particulate matter and radioactive substances.

UNIT-V

ENVIRONMENTAL CHEMICAL ANALYSIS: Analysis of soil: Sampling, determination of moisture, total nitrogen, phosphorus, silicon, lime, humus, nitrogen, alkali salts., Analysis of water samples : Dissolcved oxuygen, Chemical oxygen demand, Biological oxygen demand, Phosphates, nitrogen compounds. analysis of metalic constitutents, Analysis of Air samples: carbon mono oxide, carbon dioxide, sulphur dioxide, hydrogen sulfide, oxides of nitrogen, ammonia, ozone, hydrocarbons and aromatic hydrocarbons.,

SUGGESTED BOOKS:,

1.Environmental Chemsitry by A.K.De, Wiley Eastern Limited, New Delhi

2.A Text Book of Environmental Chemistry by O.D.Tyagia and M.Mehra-Anmol Publicaitons, 3.Environmental Pollution Control and Engineering by C.S.Rao, Wiley Eastern Limited,

4. Environmental Chemistry by P.S. Sindhu, -New Age International Publishers

5.A Text Book of Environmental Chemistry and Poolution Control by S.S.Dara ,S.Chand & Co 6.Environmental Pollution Analysis by S.M.Khopkar, Wiley Eastern Limited, New Delhi

7.Aanalytical Agricultrual Chemistry by S.L.Chopra & J.S.Kanwar -- Kalyani Publishers

8.Mannual of soil, plant, water and fertilizer analysis, R.M.Upadhyay and N.L 5harma, Kalyani Publishers, New Delhi 9.Environmental Chemistry by B.K.Sharma- Goel Publishing House, Meerut.

10.Soil Chemical Analysis by M.L.Jsackson, Prentice-Hall India Pvt Ltd, New Delhi

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. **III SEMESTER** PAPER - IV: ENVIRONMENTAL CHEMISTRY AND ANALYSIS (Regulation 2017-2018) Code: CH3T4 A Time: 3 hours Maximum Marks: 70 UNIT-I 1. a) Write the nomenclature used in the study of environmental chemistry. 6M b) What is the significance of basic segments of environment? Explain 8M Or c) Write principles of weathering. 6M d) How water, air and plants effect weathering. 8M UNIT - II 2. a) Explain in brief about hydrosphere 6M b) Write note on i) solid waste ii) Thermal pollution 8M Or c) How domestic water and industrial waste pollute water bodies? 6M d) Write note on i) Radioactive waste ii) Water guality parameters 8M UNIT – III 3. a) How soaps & detergents lead to water pollution? 6M b) What are different techniques of water treatment? 8M Or c) What are the methods used for coagulation? 6M d) Explain i) Ion Exchange reverse osmosis ii) Electrodialysis 8M UNIT – IV 4. a) Briefly explain about the following air pollutants 6M i) Carbon monoxide ii) Sulphur oxides b) What are the atmospheric sources for emission of air pollutants? 8M Or

c) How the air pollutants Hydrogen sulphide, oxides of nitrogen, can be monitored? 6M

d) Write note on : i) Ozone ii) Radioactive substances

UNIT – V

5. a) How to determine the moisture in soil sample?b) What are the different methods involved in the soil analysis? Explain.

8M **Or**

- c) How to analyze the hydrocarbons and aromatic hydrocarbons in AIR? 6M
- d) How to analyze the dissolved oxygen, COD, BOD and nitrogen compounds in water sample? 8M

CH3T4B: Organo Metallic Chemistry, Nanochemistry and Natural Products

Cours	Course: Organo Metallic Chemistry, Nanochemistry and Natural Products (code CH3T4B)		
S.No	COURSE OUTCOMES	PO`S	
	The student will be able to		
1	Memorize the basic principle and concepts of organic synthesis.	1,2,7	
2	Understand the role of organo boranes, organo silanes, organo metallic reagents, nanometallic natural products in organic chemistry.	1,2,5	
3	Execute the conceptual knowledge of various reagents in organic synthesis.	1,6,7	
4	Test the role of reagents in organic synthesis and the need of nanochemistry and natural products.	1,4	

UNIT-I

Organoboranes:

Preparation of Organobornaes viz hydroboration with BH3-THF, protonolysis, oxidation, isomerization, cyclization of alkylboranes, alkenylboranes, disiamylborane, thexylborane, 9-BBN and catechol boranes.

Free radical reactions of organoboranes, reactions with <mark>α- bromoketones, α-bromoesters</mark> reactions of alkenylboranes and trialkenyl borates.

UNIT-II

Organosilanes:

Synthetic applications of organosilicon compounds, trimethylsilly ethers, trimethylsilyl chloride, dimethyl-t-butylsilyl chloride, trimetthylsilyl cyanide, trimethylsilyliodide, Peterson olefination. Synthetic applications of α-silylcarbanion and β-silyl carbonyl compounds. The β-effect.

Organo metallic reagents:

Preparation of Grignard reagents with alkyl, allyl halides, reaction with carbonyl compounds, esters, amines. Preparation of alkyllithium, reagents, lithium diisopropyl amide (LDA).

UNIT-III

Organocopper reagents, Gilman reagents. Organo palladium reagents, preparation of Palladium reagents.

UNIT-IV

Nanochemistry:

Introduction, carbon nano tubes: structure of single and multi walled carbon nano tubes, synthesis-solid and gaseous carbon source-based production techniques, synthesis with controlled orientation.

Growth mechanism of carbon nano tubes-catalyst free growth, catalyst activated growth, general properties, electrical & optical, Mechanical, applications.

UNIT-V

Natural Products:

Terpenoids – Classification – sources, isolation, synthesis with special reference to Zingiberene, santonin, abietic acid.

Flavanoids - Classification, sources, isolation, chemistry and synthesis with special reference to quercetin and kampferol.

The highlighted syllabus will be taught online due to COVID – 19 pandemic.

M.Sc. DEGREE EXAMINATION III SEMESTER

Paper-IV :: Organo Metal	ic Chemistry, Nanochemis	try and Natural Products
	(Regulation 2017-2018)	
Code: CH3T4 B	Time: 3 hours	Maximum Marks: 70
	UNIT – I	
1.a) Write a note on 9-BBN.		6M – CO- 2 (L–2)

UNIT – I	
1.a) Write a note on 9-BBN.	6M – CO- 2 (L–2)
b) Describe the preparation of organoboranes with BH ₃ -THF	· · ·
with suitable example.	8M – CO- 3 (L–3)
(Or)	
c) Write about reactions with α -Bromoketones.	6M – CO- 2 (L–2)
d) Explain the following reactions :	8M – CO- 2 (L–2)
i) alkenyl boranes ii) trialkenyl boranes	
UNIT – II	
2.a) Write note on synthetic applications of :	6M – CO- 2 (L–2)
i) trimethyl silylchloride ii) trimethyl silyl cyanide	
b) Discuss Peterson Olefination.	8M – CO- 3 (L–3)
(Or)	
c) Explain the following:	6M – CO- 2 (L–2)
i) α -silylcarbanion ii) β -silylcarbonyl compound	
d) Write note on β -effect.	8M- CO- 2 (L-2)
UNIT – III	
3. a) Discuss the preparation of Grignard reagent with	6M – CO- 2 (L–2)
i) Alkyl halides ii) Ally halides	
b) Explain the reactions of Grignard reagent with :	8M – CO- 2 (L–2)
i) Carbonyl compounds ii) Esters with suitable example	· · · ·
(Or)	
c) Write a note on preparation and applications of lithium di is	sopropyl amide(LDA)
c) where a none on brokenmen and akknowned of manan ar a	6M– CO- 3 (L–3)
d) Write note on:	8M- CO- 2 (L-2)
i) Palladium reagents ii) Gilman reagents	
i) i unuuluin lougonto ii) onniun lougonto	
UNIT – IV	
4. a) Write structures of single and multiwall carbon nano tube	s 6M– CO- 3 (L–3)
b) Explain growth mechanism of carbon nano tubes.	8M- CO- 3 (L-3)
(Or)	
c) Define nano, explain different types of nano tubes.	6M– CO- 2 (L–2)
d) Explain the synthesis of multiwalled carbon nano tubes by	· · · · ·
method and CVD method.	8M – CO- 3 (L–3)
UNIT – V	
5.a) What are the sources of terpenoids? Explain classification	of terpenoids. $6M - CO - 1 (L-1)$
b) Write the synthesis of the following i) Zingiberene	ii) Santonin . $8M - CO - 2 (L-2)$

b) Write the synthesis of the following i) Zingiberene ii) Santonin . 8M – CO- 2 (L–2) (Or)

c) How to isolation of terpenoids.	́ 6М- СО- 2 (L–2)
d) Write synthesis of the following.	8M – CO- 2 (L–2)

i) Quercepin ii) Kampferol

PRACTICAL-I: Paper and Thin Layer Chromatography Techniques

Paper Chromatography :Atleast four practicals

CODE: CH4L1

Thin Layer Chromatography : Atleast four practicals

PRACTICAL-I: Project Work

Code: CH4L2

Max. Marks: 200

The project will be assigned in the final semester. The project will be performed at the established industry (or) in the department under the supervision of the faculty or research institutes. It may involve experimental and/or theoretical work as well as critical review of the literature. Each of the students has to carry out original research in a topic in accordance with the work chosen under the guidance and supervision of a teacher in the concerned Department of the college.

Dissertation must be submitted at the end of the semester which will be assessed by the external examiners. Dissertation must be prepared with introduction, Review of the literature, Experimental Session, Results and Discussion, Conclusion and References.

The final dissertation should have at least 40 - 60 pages typed in Times New Roman 12 font except Headings and side headings with 1.5 line spacing.

PAPER – I: Advanced organic spectroscopy

Code: CH4T1

60Hrs.(4Hrs./Week)

UNIT – I

Proton NMR Spectrscopy:

Determination of structure of organic compounds using PMR data. Spin system, Nomenclature of spin system, spin system of simple and complex PMR

spectrum (Study of AB – A₂ – AB₂. ABX – ABC – AMX interactions)

Simplification of complex spectra- nuclear magnetic double resonance, chemical shift reagents, solvent effects on PMR Spectrum . Nuclear Overhauser Effect (NOE).

UNIT-II

13C-NMR spectroscopy

Similarities and Difference between PMR and CMR-CMR recording techniques -BBC-BBD-SFORD-Gate pulse CMR spectrum.

General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonylcarbon), coupling constants.Typical examples of CMR spectroscopy – simple problems.

UNIT-III

ORD& CD Curves

Optical rotatory dispersion : Theory of optical rotatory dispersion – Cotton effect –CD curves-types of ORD and CD curves-similarities and difference between ORD and CD curves. α - Halo keto rule , Octant rule – application in structural studies.

UNIT-IV

2D NMR spectroscopy

Definitions and importance of COSY, DEPT, HOMCOR, HETCOR, INADEQUATE, INDOR, INEPT, NOESY, HOM2DJ, HET2DJ.

Study of COSY ,DEPT, HOMCOR, HETCOR, INADEQUATE INDOR INEPT ,NOESY HOM2DJ, HET2DJ, taking simple organic compounds and examples.

UNIT –V

Structural Elucidation of Organic compounds Using UV, IR, 1H-NMR, 13C-NMR and Mass spectroscopy.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. IV SEMESTER

Paper-I :: Advanced organic spectroscopy

(Regulation 2017-2018)		
Code :CH4T1	Time: 3 hours	Maximum Marks: 70
	UNIT - I	
1(a) Explain the following:		
I) Double irradiation II) AMX		(8M)
(b) Explain the effect of solvent of	•	(6M)
	(Or)	
(c) Differentiate between first ord	ber and non first order PMR	-
examples (d) How can you interpret compl	ov DMD Spootrum	(6M) (8M)
(d) How can you interpret compl		(8M)
2(a) Explain with the suitable example		n 13 C NMR (8M)
(b) what is the importance of off		
	(Or)	
(c) Discuss some important appl	(<i>)</i>	troscopy (8M)
(d) A compound of MF C ₄ H ₁₀ in i	its CMR Spectrum show 17	.1(q) 67.4(T).
Determine the structure of co	mpound by using CMR dat	a (6M)
	UNIT - III	
3.(a) Define Cotton effect with exa		(6M)
(b) Predict the sign of cotton effe		
substituent is in equatorial po	(Or)	(8M)
(c) Explain the following i) Axial		f ontical rotatory
dispersion curves.	halo ketone rule ily rypes o	(8M)
(d) Explain the applications of O	ctant rule	(6M)
		(0.1.)
	UNIT - IV	
4(a) What information is available	from the COSY experimen	t? (8M)
(b) Write explanatory note on IN		(6M)
	(Or)	
(c) What information about a cor		
the 2D INADEQUATE experimentation of N		(8M)
(d) Discuss the impartence of N	UNIT - V	ble example. (6M)
5.(a) Deduce the structure of the c		e following data
Elemental analysis: C=32.14	•	le lenewing data.
UV: No absorption above 210		and 1460cm-1
PMR δ 2.72(septet, J=6.7,1H)	, , , ,	(14M)
	(Or)	
(b) Deduce the structure of the c	compound consistent with the	ne following data

Elemental analysis: C=32.14%H 5.35% and Cl 62.5% UV: No absorption above 210 nm IR (CCl4) 2940,1265 and 690cm-1 and PMR δ 3.5(2H,D),3.3(1H,m) and 1.25(3H,d) (14M)

PAPER-II: ORGANIC REACTIONS & MECHANISMS - II

Code: CH4T2

60Hrs.(4Hrs./Week)

UNIT-I

Introduction: Different oxidative processes. Hydrocarbons: alkenes, aromatic hydro carbons, saturated C-H groups (activated and unactivated), Alcohols, diols, alkenes, epoxides, alcohols. ozonolysis, aldehydes, Ketones, Carboxylic acids, Amines, hydrazines, sulphides.

UNIT-II

Reagents for Oxidations

Oxidations with ruthenium tetroxide, iodobenzenediacetate and Tl(III) nitrate, Lead tetra acetate, SeO₂, MnO₂, Ag₂CO₃, oppenauer oxidation, peracids., perhydroxylation using KMnO₄, OsO₄, HIO₄, peracids, oxidation with iodine silver carboxylate.

UNIT-III

Reductions Introduction: Reductive process of Hydrocarbons: alkenes, alkynes, and aromatic rings, Carbonyl compounds – aldehydes, ketones, acids, Nitro, nitroso, azo and oxime group.

Catalytic hydrogenations – Heterogeneous hydrogenation, stereochemistry and mechanism, selectivity of Reduction, homogeneous hydrogenation.

UNIT-IV

Reagents for Reductions Reduction by dissolving metals: Reduction with metal and liquid ammonia (Birch Reduction of aromatic compounds), Reduction with metal acid: Clemensons reduction, Reduction by hydride transfer reagents, Aluminium alkoxide:Meerwein Pondorf Verley Reduction, LiAlH4, NaBH4, Diisobutylaluminium hydride(DIBAL), Sodium cyano borohydride ,trialkyl borohydrides, Reduction with diimide. Wolff-Kishner reduction.

UNIT-V

Molecular Rearrangements

Migration to electron deficient carbon atom. Pinacole-Pinacolone rearrangement, Wagner-Meerwein rearrangement, Dienone-Phenol rearrangement, Benzil-Benzilic acid rearrangement, Favorski rearrangement and Claisen rearrangement.

Migration to electron deficient hetero atom:.Wolf, Hofmann, Curtius, Schmidt, Beckmann rearrangement, Baeyer-Villiger rearrangement, Stevens, Witting, Neber rearrangements. Fries, Fischer-Hepp, Orton, Bamberger, Benzidine, Cumene Hydroperoxide rearrangements.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. IV SEMESTER

Paper-II :: Organic Reactions & Mechanisms

(Regulation 2017-2018)

Code: CH4T2	Time: 3 hours	Maximum Marks: 70
	UNIT – I	
1.a) Write note on oxidati	ons of aromatic hydrocarbons.	6M
b) Write note on the oxi		8M
i) Alcohols ii) Alk	kenes	
	(Or)	
c) Write note on ozonoly		6M
d) Write note on the oxid	dations of:	8M
i) Amines ii) I	Hydrazines	
	UNIT – II	
2.a) Write note on oxidati	on with Ruthenium tetroxide.	4M
	nportance of the following:	8M
i) Lead tetra acetate	ii) MnO ₂	
	(Or)	
c) Write note on oxidation	on with Thallium (III) nitrate	6M
	oplications of the following reagents:	8M
i) OsO4 ii) HIO4	l	
	UNIT – III	
3.a) Write a note on the r	eductive process of aromatic rings.	6M
b) Write note on the rec	ductions of carbonyl compounds.	8M
	(Or)	
c) Write note on Homog	geneous hydrogenation with suitable exa	mple. 6M
d) Write note on mecha	anism and stereochemistry of heterogene	eous hydrogenation.
		8M
	UNIT – IV	
4.a) Write note on Birch r	eduction.	10M
	ondorf Verley Reduction.	4M
, ,	(Or)	
c) Write note on Wolf-K		4M
d) How do the following	reagents serve as reducing agents.	10M

i) Di isobutyl aluminium hydride ii)	Diamide	iii) Li AlH4	
UN	IIT – V		
5.a) Define and discuss the mechanism of p	oinacol- pinac	colone rearrangement.	6M
b) Discuss the mechanism of the following :			8M
i) Wagner Meerwein rearrangement			
ii) Claisen rearrangement			
(0	Dr)		
c) Give a detailed account of Hofmann re	arrangement	t.	6M
d) Write note on the following :			8M

d) Write note on the following :
i) Baeyer-Villiger rearrangement
ii) Neber rearrangement

PAPER – III: GREEN CHEMISTRY

Code: CH4T3A

60Hrs.(4Hrs./Week)

UNIT – I

Fundamentals and Significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk and hazard. An introduction to the tools of green chemistry and its fundamental principles.

UNIT – II

Use of Renewable Raw Materials: Evaluating feedstock and starting materials – their origins, toxicity, sustainability and the downstream implications of the choice of feedstock. Some examples of the use of green starting materials.

Atom Efficient Processes: Evaluating chemical reactions according to their yield and atom efficiency. Examples of efficient stoichiometric and catalytic processes.

UNIT – III

Greener Solvents: The use of volatile organic compounds and the need for innocuous replacements. The use of supercritical fluids, solventless, solid supported reagents and aqueous systems as alternative solvents.

Catalysis: Energy requirements and usage, optimization of the reaction by minimizing the energy requirements. Examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites and oxidations using molecular oxygen or hydrogen peroxide.

UNIT – IV

Greener reagents and products: Methods of designing safer chemicals such as structure-activity relationships, avoidance of toxic functional groups, minimising bioavailability and use of auxiliary materials. Examples of greener reagents including replacement of phosgene, methylations using dimethylcarbonate, solid state polymerisations, alternative nitrile synthesis. Evaluation of persistence in the environment and examples of biodegradable commercial products; polylactides, polyaspartates and antifoulants.

UNIT – V

Ionic Liquids: Definition of ionic liquid. Models of molten salt formation and the thermodynamics of melting. Structural influences on the melting point of a salt. Physical properties of molten salts and ionic liquids, polarity, interionic bonding, structure. Applications of ionic liquids to synthesis. Effects on reaction mechanisms. Acid catalysed reactions. Applications of ionic liquids in catalysis. Hydrogenations, oxidations and C-C coupling reactions.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. IV SEMESTER

PAPER – IV: GREEN CHEMISTRY

(Regulation 2017-2018)

Time: 3 hours

Code: CH4T3A Marks: 70 Maximum

UNIT– I

1. a) Define green chemistry. Explain.

6M

b) Discuss the impacts of chemistry on environment.

8Ń

Or

c) Write note on principles of green chemistry.

6M

d) Explain how green methods are advantageous than normal chemical methods.

8M

UNIT - II

2. a) Discuss green starting materials with examples.

4M

b) Explain how one can evaluate feedstock and starting materials.

10M

Or

c) How do you evaluate chemical reactions according to their yield and atom efficiency?

8M

d) Discuss about the following

6M

i) Efficiency stiochio chemistry ii) Catalytic processes

UNIT – III

3. a) Enumerate the significance of solvent less reactions in green chemistry with suitable examples.

6M

b) Discuss the importance of the following in green chemistry.

8M

i) Supercritical fluids ii) Solid supported reagents

Or

c) Write note on oxidations brought about by molecular oxygen or H_2O_2 .

6M

d) Give account on energy requirements in green chemical processes.

8M

UNIT – IV

4. a) Explain the following :

i) Structure activity relationship ii) Avoidance of toxic functional Group.

8Mb) Give a brief account on greener reagents.

6M

Or

c) Discuss about the following

8M

i) Bio degradable commercial products ii) polyaspertates with suitable examples.

d) Explain the significance of polyactides and antifoulants with suitable examples.6M

UNIT – V

5. a) Define ionic liquid. Explain with example.

6M

b) Discuss models of molten salt formation and thermo dynamics.

8M

Or

- c) Write applications of ionic liquid to synthesis.
- d) Discuss acid catalyzed reactions and applications of ionic liquids in catalysis.

8M

6M

PAPER - III: ANITIBIOTICS, DRUGS, VITAMINS & STEROID HARMONES

Code: CH4T3B

60Hrs.(4Hrs./Week)

UNIT-I

Antibiotics:

Cell wall biosynthesis, inhibitors, β -lactam rings, antibiotics inhibiting protein synthesis, structure elucidation of ampicillin, amoxicillin, chloramphenicol and gramidin.

UNIT-II

Drugs and Medicinal chemistry:

(I) Chemotherapy : Methodology for structure – activity relationship determination.

(II) Drugs: Structure synthesis & Activity of the following : Anticancer Agents: Taxol, Vinblastine, Vincristine, Campothecin.

UNIT-III

Chemotherapy of Brain: Introduction – neurotransmitters CNS stimulants : Strychnine, Picrotoxin (CNS activity only) nikethemide caffeine CNS depressants: General anesthetics, mode of action of Sedatives & Hypnotics.

UNIT-IV

(I) Antimalarials: Paludrin - quinacrin - chloroquin - camoquin - pamaquin - sontoquine.

(II) Antiamoebic agents : Chiniofon – Resotren – Iodochlorohydroxyquin.

(III) Sulpha drugs: Sulphanilamide – Dihydrocurprine – Prontosil

(IV)Antiseptics: Diphenyl – Chlorophene-2,4,4-trichloro-2'-hydroxydiphenyl ether – aminocerine hydrochloride.

UNIT-V

Fat Soluble Vitamins: Chemistry, Synthesis of vitamin A1, and vitamin K **Water soluble Vitamins**: Chemistry, Synthesis of B1 and C

Steroid Hormones:

Chemistry & synthesis of progestrone, testosterone.

Non steroid hormones: Chemistry & synthesis of thyroxin, epinephrine.

TEXT BOOKS:

- 1. Introduction to Medicinal Chemistry Wiley VCH
- 2. Text Book of Organic Medicinal and Pharmaceutical Chemistry, Wilson and Gisvild, (ed Robert F. Dorge)
- 3. An introduction to drug design by SS Pandeya
- 4. Buger's Medicinal Chemistry and drug discovery Vol.I by (Ed) ME Wolff John Wileyby A. Burger
- 5. The Organic Chemistry of drug design and drug action by RB Silverman, Academic press
- 6. Principles of Medicinal Chemistry by William O. Foye, Lea & Febiger, Philadelphia/London, 1989.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. IV SEMESTER PAPER – III: ANTIBIOTICS, DRUGS, VITAMINS & STEROID HARMONES

(Regulation 2017-2018)

Code: CH4T3B	Time: 3 hours	Maximum Marks: 70
	UNIT– I	
/	ors of cell wall biosynthesis?	6M
b) Define β -lactams. E	xplain with suitable examples. Or	8M
c) Explain the synthes d) Write about the follo	is of the following (i) Amplicillin (i	ii) Chloramphenicol. 8M
(i) Antibiotics (ii) A	ntibiotics inhibiting protein synthe	esis. 6M
	UNIT - II	
2. a) Explain about Chem	notherapy and methodology for si	tructure in drug design.6M
<i>i</i>	nce of structure activity relationsl Or	
c) What are the metho	ds used in treatment of cancer?	6M
,	ire elucidation of TAXOL.	8M
	UNIT – III	
3. a) Explain about neuro		6M
b) Write CNS activity c	•	
(i) Strychnine	(ii) Picrotoxine Or	8M
c) Write a brief note o	• I	6M
,	atives and hypnotics.	8M
(1, a) Write synthesis and	UNIT – IV d activity of sulphanilamide.	8M
	s of Diphenyl – Chlorophene and	
hydroxydiphenyl et		_, , , , , ,
	Or	
<i>i i</i>	e structure, activity and synthesis	-
chiniofon. d) Give the synthesis	of chloroquin and pamaquin.	8M 6M
		OM
	UNIT – V	
,	synthesis of vitamin K.	6M
b) Discuss structure e	lucidation of epinephrine Or	8M
c) Write synthesis of v		6M
	elucidation of androsterone.	8M

PAPER- IV: TECHNIQUES FOR MODERN INDUSTRIAL APPLICATIONS

Code: CH4T4A

60Hrs.(4Hrs./Week)

UNIT-I

Classical Methods of purification

Recrystallization: Basic principles, choice of solvent, seeding, filtration and centrifugation and drying. Concepts of fractional crystallization.

Distillation: Basic principles. Distillation types- continuous distillation, batch distillation, fractional distillation, vacuum distillation and steam distillation.

UNIT-II

Thin Layer chromatography:

Basic Principles. Common stationary phases, Methods of preparing TLC plates, Selection of mobile phase, Development of TLC plates, Rf value. Application of TLC in monitoring organic reactions. identification and quantitative analysis.

UNIT-III

Paper chromatography:

Basic Principles. Ascending and descending types. Selection of mobile phase, Development of chromatograms, One and two dimensional paper chromatography, Applications of paper chromatography.

UNIT-IV

Gas chromatography:

Basic Principles. Different types of GC techniques. Selection of columns and carrier gases. Instrumentation. detectors; RT values. Applications in the separation, identification and quantitative analysis of organic compounds.

UNIT-V

High Performance liquid chromatography(HPLC):

Basic Principles. Normal and reversed Phases. Selection of column and mobile phase. Instrumentation. Detectors; RT values. Applications in the separation, identification and quantitative estimation of organic compounds.

SUGGESTED BOOKS:

- 1. Principles of Instrumental Analysis by D. A. Skoog, F. J. Holler and T. A. Nieman, Harcourt College Pub.
- 2. Separation Techniques by M. N. Sastri, Himalaya Publishing House (HPH), Mumbai.
- 3. Bio Physical Chemistry by A. Upadhyay, K. Upadhyay and N. Nath, (HPH), Mumbai.
- 4. A Hand Book of Instrumental Techniques for Analytical Chemistry- Ed-F. A. Settle, Prearson Edn, Delhi.27
- 5. Introduction to Organic Laboratory Techniques-D. L. Pavia, G. M. Lampman, G. S. Kriz and R. G. Engel, Saunders College Pub (NY).
- 6. Instrumental methods of Chemical Analysis by B. K. Sharma, Goel Publish House, Meerut.
- 7. Instrumental methods of Chemical Analysis by H. Kaur, Pragati Prakasan, Meerut.
- 8. Protein Purification-Principles and practice, III Edn- R. K. Scopes, Narosa Publishing House, Delhi.

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018 IVSEMESTER

Paper-IV :: Techniques for Modern Industrial Applications

(Regulation 2017-2018) Code: CH4T4A Time: 3 hours Maximum Marks: 70 UNIT-I 1) a) Write a note on Recrystallization. 6M b) Explain the following 8M i) seeding ii) filtration iii) centrifugation iv) drying or c) Write about different types of distillations with examples? 6M d) Explain the following 8M i) Continuous distillation ii) steam distillation UNIT-II 2) a) Explain basic principle of TLC. 6M b) What are the methods that are involved in the preparation of TLC plates? 8M Or c) Write a note on development of TLC plates. 6M d) Explain application of TLC. 8M UNIT-III 3) a) What is the basic principle of paper chromatography? Explain. 6M b) Explain Ascending and Descending paper chromatography. 8M Or c) Explain different types of two dimensional paper chromatography. 6M d) Write applications of paper chromatography. 8M **UNIT-IV** 4) a) Write basic principle of GC and Explain different types of GC techniques. 6M b) Explain different types of columns used in GC. 8M Or Draw schematic diagram of GC. Explain 6M C) d) Explain few applications of GC. 8M UNIT –V 5) a) Explain different phases in HPLC 6M b) Describe instrumentation of HPLC and explain the selection of the column 8M or c) Explain different types of detectors used in HPLC. 6M

d) Explain few applications of HPLC

PAPER- IV: SEPARATION TECHNIQUES AND ELECTRO ANALYTICAL TECHNIQUES

Code: CH4T4B

60Hrs.(4Hrs./Week)

UNIT-I

SEPARATION TECHNIQUES IN CHEMICAL ANALYSIS: SOLVENT EXTRACTION : Introduction, principle, techniques, factors affecting solvent extraction, quantitative treatment of solvent extraction equilibria-chelate and ion association systems-synergism., ION EXCHANGE : Introduction, action of ion exchange resins, separation of inorganic mixtuers, applications.,

UNIT - II

CHROMATOGRAPHY: Introduction-Column, paper chromatography-Thin layer chromatography and HPLC and Gas chromatography : Introduction, equipment. Gas liquid chromatography. Exclusion chromatography.-Applications

UNIT III

Electrogravimetry : - Theory of electro analysis–Polarisation–Over voltage–Principles involved in electrogravimetric analysis–current – voltage curves – separation of metals by electrolysis – constant current – controlled potential electrolysis.

Unit IV

Coulometry : - Coulometry at controlled potential – separation of Nickel and Cobalt – coulometres – types of coulometric analysis – constant current coulometry of coulometric titrations.

UNIT –V

Voltametry, Polarography and Amperometric titrations: - Voltametry – Principle of Polarography – dropping mercury electrode; working; factors effecting the limiting current; residual current, migration current – diffusion current – kinetic current – polarographic maximum – Half wave potential – Organic Polarography, Rapid Scan polarography – cyclic voltametry – qualitative and quantitative polarographic analysis – Amperometric titrations – its advantages and disadvantages – Bi Amperometric titrations – Chrono potentiometry

SUGGESTED BOOKS:,

1. B.K.Sharma -- Instrumental methods of chemical analysis, Goel Publishers,

2.G.Chatwal and S.Anand --Instrumental methods of chemical analysis,,

3. J.J.Lingane- Electroanalytical Chemistry- Inter Science,

4. A.I.Vogel -- A text Book of Quantitative Inorganic Analysis-ELBS,

- 5 .H.H.Willard,LL Merrit and JA Dean -- Instrumental Methods of Analysis.,
- 6. Peace-Instrumental Methods of Analysis,

7. J.W.Robbinson- Under graduate Instrumental Analysis,

8. R.A.Day and A.L.Underwood- Quantitative Analysis,

9. G.W Eving- Instrumental Methods of Chemical Analysis.,

10.D.A.Skoog, D.M.West and F.J.Holler--Fundamentals of Analytical Chemistry,

- 11. H.Kaur-- Instrumental methods of chemical analysis, Pragathi Prakasan,
- 12 .D.A.Skoog, F.J.Holler and Neman-- Instrumental Methods of Analysis.,
- 13.G.H.Morrison and H.Frieser- Solvent extraction in Analytical Chemistry,
- 14. Chemical Separation methods- JA Dean, D.Vannostrand Company, New York
- 15. Physical and Chemical Methods of Separation by E.W.Berg, MC Graw Hill Book Company, New York

M.Sc. DEGREE EXAMINATION, NOVEMBER 2018. IVSEMESTER

Paper-II :: SEPARATION TECHNIQUES & ELECTRO ANALYTICAL TECHNIQUES

(Regulation 2017-2018)

Code:CH4T4B Time:3hours Maximum Marks: 70				
UNIT-I				
 a) Write the principle of solvent extraction. b) Discuss the technique and factors affecting solvent extraction. or 	6M 8M			
c) Explain ion exchange phenomenon with suitable theory.d) Write application of ion exchange.				
UNIT-II				
 2) a) Write basic principle of column and paper chromatography b) Discuss the application of TLC and GC Or 	6M 8M			
c) Briefly explain about exclusion chromatographyd) Write application of Gas liquid chromatography	6M 8M			
UNIT-III				
 3) a) Write a brief note on electro analysis. b) Explain i) polaristion ii) over voltage Or 	6M 8M			
c) What is the basic principle involved in electro gravimetric analysis?d) Explain separation of metals by electrolysis.	6M 8M			
UNIT-IV				
 4) a) Give a brief account on coulometry. b) What are the different types of coulometric analysis? Or 	6M 8M			
c) Write note on coulometric titrationsd) How cobalt and Nickel can be separated by coulometry?	6M 8M			
UNIT –V				
 5) a) write the principle of polarography b) write a note on dropping mercury electrode and factors effecting the limitir current. 	6M Ig 8M			
or c) Discuss about organic polarography	6M			

d) What are amperometric titration? Explain advantages & disadvantages with suitable examples. 8M

P.B. SIDDHARTHA COLLEGE OF ARTS & SCIENCE :: VIJAYAWADA-10 (An Autonomous college in the jurisdiction of Krishna University, Machilipatnam)

Instrumental Methods for chemical analysis

Total teaching Hours for semester: 15 Periods week: 2 Max Marks: 2

Learning Outcome:

1. To develop expertise relevant to the professional practice of chemistry

2. To develop an understanding of the range and theories of instrumental methods available in analytical chemistry

3. To develop an understanding of the role of the chemist in measurement and problem solving in chemical analysis

4. To provide an understanding of and skills in advanced methods of separation and analysis

5. To provide practical experience in selected instrumental methods of analysis

SPECTROSCOPY

UNIT – I

Spectrophotometry: Interaction of electromagnetic radiation with matter-classification of methods-Beer Lambert Law-Deviation from Beer Lambert Law.

UV-Visible Spectroscopy: Origin of adsorption spectra, components of typical instrument-Source-Tungsten lamp-Hydrogen and Deuterium discharge lamps, Wavelength selectors-Filters-Prisms and Grating-Sample cell-Detectors-Single and double beam spectrophotometers

ELECTRO ANALYTICAL INSTRUMENTATION

UNIT-II

Potentiometric methods: Principle-technique and detection limit PH using Electrometric method

SEPARATION TECHNIQUES

UNIT – III

Chromatography: Classification of chromatography methods, principles of differential migration adsorption phenomenon, Nature of adsorbents, solvent systems, R_f values, factors effecting R_f values.

UNIT –IV

Thin layer Chromatography (TLC): Advantages. Principles, factors effecting R_f values. Experimental procedures. Adsorbents and solvents. Preparation of plates. Development of the chromatogram. Detection of the spots. Applications.

P.B.SIDDHARTHA COLLEGE OF ARTS & SCIENCE :: VIJAYAWADA-10 (An Autonomous college in the jurisdiction of Krishna University, Machilipatnam)

Instrumental Methods for chemical analysis

Total Practical Hours for semester: 30 periods Max Marks:

No of Practical hours/ week: 3

- 1. Two Practical's based on spectrophotometer
- 2. One Practical using Potentiometer
- 3. Identification of Amino acids using TLC
- 4. Water analysis
- 5. Estimation of PH by Electrometric method

Add-on course in Chemistry (PG)

ORGANOMETALLIC CHEMISTRY & METAL MEDIATED ORGANIC SYNTHESIS Overview

The course covers an advance level of organometallic chemistry and recent development of cross coupling reactions and their applications in organic synthesis,

UNIT – I

Introduction of Organometallic Chemistry, Ligand Substitution Reactions, Oxidative Addition [1.Concerted Mechanism], Oxidative Addition[2.SN2 Mechanism], Oxidative Addition[3.RadicalMechanism], Reductive Elimination, Insertion and elimination.

UNIT – II

Hydrogenation of Alkenes, Hydrosilation reaction, Hydroformylation reaction, Alkene dimerization, Alkene polymerization, Monsanto acetic acid process, Wacker process, Synthetic gasoline, Synthetic gas

UNIT - III

Asymmetric hydrogenation ,Kumada Coupling reaction ,Suzuki coupling reaction, Stille coupling reaction,Sonogashira coupling reaction, Heck coupling reaction

UNIT - IV

Metathesis of olefins and alkynes ,Buchwald-Hartwig coupling reaction ,Kulinkovich Reaction and its mechanism,Pauson–Khand reaction,Glaser coupling reaction,Nozaki-Hiyama-Kishi coupling reaction

Reference books

1. Organometallic Chemistry – R C Mehrotra and A Singh, New Age Publications

2. Inorganic Chemistry- Principles of Structure and Reactivity, James E Huheey, Ellen A. Keiter, Richard L. Keiter, Pearson Education

3. Advanced Inorganic Chemistry- F A Cotton, G Wilkinson, Carlos A. Murillo, Manfred Bochman- John wiley and Sons.

4. Inorganic Chemistry – Allan G Sharpe, Addison Wesley

5. Organic Synthesis – Michael B.Smith (2nd Edition – McGraw Hill

6. Name Reactions – Jie Jack Li – (2nd Edition – Springer)

7. Organic Chemistry – Clayden, Greeves, Warren and Wothers (Oxford University Press)
